Do you know what the difference is between major depressive disorder and dysthymic disorder? Can you explain the difference between panic disorder and social phobia? The Diagnostic and Statistical Manual-IV Text Revision (DSM-IV TR) is where you can find the answers. Participants will learn about the most common diagnoses in community mental health and discuss how to make an accurate diagnosis and why it matters.

Upon Completion of this workshop, participants will be able to:

• Define differential diagnosis
• Explain the decision tree found in the DSM-IV TR
• List the top five commonly diagnosed mental health conditions
