PREPARING THE ADULT MENTAL HEALTH WORKFORCE TO SUCCEED IN A TRANSFORMED SYSTEM OF CARE

UNDERSTANDING MENTAL HEALTH CONDITIONS

Module II
NASMHPD/OTA Curriculum
Module Created by Huckshorn, Putnam and Jorgenson
December 2008
LEARNING OBJECTIVES

✓ Define Mental Illness
✓ Outline the Primary Classification of Mental Illness
✓ Discuss Attitudes and Discrimination
✓ Describe Stress-Vulnerability
Primary Definitions

**Mental Illness (Condition):** A disturbance in an individual’s thinking, emotions, behaviors, and physiology

*(Keefe, 1998)*

**Mental Health:** A state of well-being in which individuals function well in society and are generally satisfied with their lives. *(Keefe, 1998)*
They said I would never get better.
I would always be mentally ill.
They said I would be in and out of mental hospitals
the rest of my life.
I could never be the person I was before
my mental illness.
I made up my mind in the hospital that I would prove them wrong.

Andrea Schmook
Primary Classifications of Serious Mental Conditions

Most common major disorders

- Schizophrenia
- Bipolar Disorder
- Major Depression
- Post Traumatic Stress Disorder
- Borderline Personality Disorder
Regardless of the Label ...

- Respect
- Dignity
- Person First Language
- Individualized
- Person-Driven

"Ah, Mr. Bromley. Nice to put a face on a disease."
Schizophrenia

Affects about 1 in every 100 persons

Occurs in every country, every culture, every racial group, and in every income level

Also known as a “thought disorder”

difficult to know what is real and what is not;
can cause problems with motivation,
concentration, and feeling joy.

(CMHS EBP Toolkits, 2003)
This image is of 28-year-old identical twins, one with schizophrenia and the other well. It therefore clearly illustrates two points: (1) schizophrenia is a brain disease with measurable structural and functional abnormalities in the brain; and (2) it is not a purely genetic disease, and other biological factors play a role in its etiology.

**SCHIZOPHRENIA IN IDENTICAL TWINS**

28 year old
Identical twins

MRI scans of 28-year-old male identical twins showing the enlarged brain ventricles in the twin with schizophrenia (right) compared to his well brother (left).
Schizophrenia is no one’s fault.

Old theories - parenting, drug abuse, poverty, weak character - have been well researched and discarded.

Expert’s believe in biological vulnerability, caused by the imbalance of chemicals (neuro-transmitters) in the brain & environmental stressors.

(CMHS EBP Toolkit, 2003)
Talented People with Schizophrenia in Recovery

✓ John Nash
✓ Patricia Deegan, Ph.D.
✓ Vaslav Najinsky
✓ Fred Frese, Ph.D
Schizophrenia

Positive symptoms: hallucinations, delusions, cognitive difficulties, a decline in social or occupational functioning, and becoming disorganized or even catatonic

(CMHS EBP Toolkits, 2003)
**Negative symptoms:** a lack of energy, motivation, pleasure, and/or being able to express emotions, and can be accompanied with feeling sad at times

*(CMHS EBP Toolkits, 2003)*
Schizophrenia

Hallucinations are *false perceptions*

- *Hearing voices* -- most common type
- *Seeing things* - uncommon

Delusions are strongly held *false beliefs*

- Individualized and real to the person.
- Thinking others are trying to hurt me,
- Having special powers, or
- Thinking someone else is controlling “my thoughts”

*(CMHS EBP Toolkits, 2003)*
Schizophrenia

- Disordered cognitive symptoms
- Declining social/job functioning
- Disorganized behavior
- Catatonia

(CMHS EBP Toolkits, 2003)
Bipolar Disorder

About 1 of every 100 persons

Also known as a “mood disorder”

Symptom “hallmarks” help clinicians diagnose

(CMHS EBP Toolkits, 2003)
Bipolar Disorder

Bipolar disorder...no one’s fault.

Scientists believe symptoms are caused by a chemical imbalance in brain chemistry

Symptoms typically emerge either in the teens or young adulthood, or later when people are in their late 30’s or 40’s (CMHS EBP Toolkits, 2003)
Renowned People with Bipolar Disorder

Patty Duke
   Actress
Vincent van Gogh
   Artist
Winston Churchill
   Prime Minister
Vivian Leigh
   Actress
Bipolar Disorder

Severe mood swings that range from “severe depression” to “intense joy or elation”

_Hypo-mania_ and _mania_ are words used to describe these states of “well being” or “elation”

A seriously low mood or significant depression is the other “major symptom” of bi-polar illness

(CMHS EBP Toolkits, 2003)
Famous People who Struggled with Mental Illness

Mary Todd Lincoln & her husband
President Abraham Lincoln
Major Depression

Depression is the most common serious mental condition

Major Depression: This includes having one or more episodes that last at least 2 weeks where there is a very sad mood or the loss of interest in regular activities or interests

(CMHS EBP Toolkits, 2003)
Major Depression: SYMPTOMS

- Sad mood, “feeling dark, down all the time”
- Change in appetite
- Feeling tired, having low or no energy
- Feeling helpless, hopeless, or worthless
- Suicidal thoughts or actions
- Concentration problems

(CMHS EBP Toolkits, 2003)
“The pain grew and grew and I began to experience suicidal thoughts. I realized that life for me was at a desperate impasse. I thought of the garage as a place where I might sit in the car and inhale carbon monoxide. I’d look at the rafters in the attic and think of them as places where I might hang myself. I looked at sharp objects as being implements for my wrist.”
Risk Factors Related to Suicidal Thoughts or Intentions

Sampling of key risk factors for suicide:
- Making or changing a will
- Giving away prized possessions
- Putting personal or financial matters in order
- Conveying a sense of hopelessness about the future
- Threat or loss of primary therapist
- Rejection by family or significant other or even staff

(Horsfall et al, 2001)
Borderline Personality Disorder: Symptoms

✓ Frantic efforts to avoid real or imagined abandonment
✓ Unstable moods and impulse control problems
✓ Rage that leads to self harm or harming others
✓ Propensity for dangerous behaviors
✓ Propensity to find chaotic relationships wherever person lives or works
✓ Pervasive lack of hope, self worth, or insight

(APA, 2000)
Post-traumatic Stress Disorder

The DSM IV-TR (2000), defines PTSD as a disorder that follows exposure to a traumatic life event or events that involves a personal experience of actual or threatened death or serious injury, similar threat to another person, or learning about a violent death, harm, or threat to a significant other

(APA, 2000)
Effects of Trauma on the Brain

(www.ChildTrauma.org)
PTSD and the Iraq War

86% of soldiers reported knowing someone who was seriously injured or killed there

77% reported shooting at the enemy

One in five Iraq veterans return home seriously impaired by PTSD

(Hoge, C.W, et al., 2004)
“I have PTSD. I know when I got it — the night I killed an 8 year old girl. Her family was trying to cross a checkpoint... we ended up shooting all of them ... It was a family of 6. The only one that survived was a 13-month-old and her mother. And the worst part about it all was when I went to see what I’d shot at, there was an 8 year old girl there. I tried my best to bring her back to life, but there was no use.”

</table>
If I could say anything to all the staff in the world it would be this: Forget everything you were taught in school and be prepared to listen… Don’t criticize and think it’s a lie. Just listen and ask questions and be kind. Just take time to listen…

(Interview with adult trauma survivor (C.D.), 2005)
The Stress Vulnerability Model

*Biological vulnerability* refers to people that are born with, or acquire very early, a tendency to develop a problem in a medical area.

*Stress (environmental and/or psycho-social stressors)* also seems to play an important factor in contributing to the development of mental conditions.

(From CMHS EBP Toolkits, 2003; USDHHS, 1999)
Stress-Vulnerability and Recovery

For me it’s been vital to be aware of when I am under stress. Because of my illness, I’m extra sensitive to stress. It has also been vital for me to take the lead role in my treatment, since I believe that I know best what is going on inside my head. (David L.)

Reduce biological vulnerability
Cope with life stressors more effectively
Learn to manage your illness
Develop your own recovery plan

(CMHS EBP Toolkits, 2003)
Well-Being and Recovery

**Mental Health:** A state of well-being in which individuals function well in society and are generally satisfied with their lives

*(Keefe, 1998)*

**Recovery:** Journey of healing and transformation enabling a person with a mental illness to live a meaningful life in the community of his or her choice while striving to achieve his or her potential

*(National Consensus Statement on Recovery, 2005)*
“My recovery from manic depression has been an evolution, not a sudden miracle”

- Patty Duke
