SEX BY AGE BY DISABILITY STATUS

Universe: Civilian noninstitutionalized population  
2010-2012 American Community Survey 3-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

	Delaware	
	Estimate	Margin of Error
Total:	893,732	+/-510
Male:	429,843	+/-513
Under 5 years:	28,689	+/-159
With a disability	327	+/-188
No disability	28,362	+/-217
5 to 17 years:	75,854	+/-257
With a disability	4,919	+/-713
No disability	70,935	+/-799
18 to 34 years:	97,497	+/-581
With a disability	6,243	+/-802
No disability	91,254	+/-943
35 to 64 years:	169,726	+/-452
With a disability	19,974	+/-1,172
No disability	149,752	+/-1,291
65 to 74 years:	35,224	+/-284
With a disability	7,826	+/-583
No disability	27,398	+/-603
75 years and over:	22,853	+/-224
With a disability	10,052	+/-542
No disability	12,801	+/-550
Female:	463,889	+/-417
Under 5 years:	27,303	+/-100
With a disability	523	+/-257
No disability	26,780	+/-278
5 to 17 years:	72,981	+/-178
With a disability	2,778	+/-450
No disability	70,203	+/-507
18 to 34 years:	103,242	+/-441
With a disability	5,081	+/-768
No disability	98,161	+/-894
35 to 64 years:	187,717	+/-450
With a disability	26,522	+/-1,413
No disability	161,195	+/-1,426
65 to 74 years:	40,531	+/-215
With a disability	8,930	+/-743
No disability	31,601	+/-785

	Delaware	
	Estimate	Margin of Error
75 years and over:	32,115	+/-295
With a disability	15,222	+/-841
No disability	16,893	+/-866

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

While the 2010-2012 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

#### Explanation of Symbols:

1. An '\*\*\*' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '\*\*\*' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '\*\*\*\*\*' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.
