Weekly Influenza Report
Week 8 (02/22/09-02/28/09)

National Synopsis:
During week 7 (February 15-21, 2009), influenza activity increased slightly in the United States.

- One thousand four hundred five (24.6%) specimens tested by U.S. World Health Organization (WHO) and National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories and reported to CDC/Influenza Division were positive for influenza.
- The proportion of outpatient visits for influenza-like illness (ILI) was above the national baseline.
- Eight influenza-associated pediatric deaths were reported.
- The proportion of deaths attributed to pneumonia and influenza (P&I) was below the epidemic threshold.
- Eight influenza-associated pediatric deaths were reported.
- The proportion of outpatient visits for influenza-like illness (ILI) was above the national baseline. ILI decreased nationally and in six of the nine regions compared to the previous week. The East North Central, East South Central, Mountain, New England, South Atlantic, West North Central, and West South Central regions reported ILI above their region-specific baselines.
- Twenty-seven states reported widespread influenza activity, 17 states reported regional activity; the District of Columbia and six states reported local influenza activity; and Puerto Rico reported sporadic influenza activity.

Delaware Influenza Surveillance:

<table>
<thead>
<tr>
<th>Total Laboratory Confirmed Cases:</th>
<th>482</th>
</tr>
</thead>
<tbody>
<tr>
<td>Influenza A:</td>
<td>336 (69.7%)</td>
</tr>
<tr>
<td>Influenza B:</td>
<td>144 (29.9%)</td>
</tr>
<tr>
<td>Influenza A&amp;B:</td>
<td>2 (0.4%)</td>
</tr>
</tbody>
</table>

Counties:
- **New Castle** – 184 (A’s = 141 (76.6%), B’s = 42 (22.8%), A,B = 1 (0.5%))
- **Kent** – 162 – (A’s = 114 (70.4%), B’s = 47 (29.0%), A,B = 1 (0.6%))
- **Sussex** – 136 – (A’s = 81 (59.6%), B’s = 55 (40.4%))

Age Range: 20 days – 94 yo

Deaths: 0

Total Unconfirmed Cases: 83

**Influenza Activity for Week 8: Widespread**

Note: Beginning in Week 8, the DPH Lab requested that each hospital submit only 3-5 specimens per week for confirmatory testing; this may affect the number of unconfirmed cases in the future weeks.

- **No Activity**: No laboratory-confirmed cases of influenza and no reported increase in the number of cases of ILI.
- **Sporadic**: Small numbers or isolated cases of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak has been reported, but there is no increase in cases of ILI.
- **Local**: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in a single region of the state.
- **Regional**: Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in at least 2 but less than half the regions of the state. (This level of activity does not apply for small states with 4 or fewer regions.)
- **Widespread**: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in at least half the regions of the state.
ILI cases reported from Sentinel providers
3 of 12 sentinel providers reporting

Note: This data is current as of distribution date and is subject to change.
Note: Week 5 – No sentinel providers reported ILI to DPH (n=0). Therefore, the zero does not indicate there were no cases.

ILI cases reported from corporations/LTCF
4 of 5* sites reporting
(*one organization that previously reported is no longer participating)

Note: This data is current as of distribution date and is subject to change
*Note:
Confirmed cases: PCR (Polymerase Chain Reaction) positive or Influenza culture positive.
Unconfirmed cases: Rapid assay positive, not confirmed with PCR or culture.
