Above, left to right: A. I. du Pont Hospital for Children (I) 180 beds, Christiana Hospital (II), 808 beds & Wilmington Hospital (III), 258 beds.

The EMSC Standards Committee, a group of 19 Delaware clinical experts, worked since 2007 to develop the PECF Recognition Program with the goal of standardizing emergency medical care for children statewide. The committee reviewed documents adopted in other states such as Illinois, California, and Tennessee as models for the Delaware program.

Delaware, ‘The First State’, has a population of just under one million people. There are eight acute care hospitals with Emergency Departments that treat children. In 2011 approximately 73,207 pediatric patients were treated in these eight Emergency Departments.

Delaware completed the initial phase of development of its new Statewide Pediatric System through recognition of Delaware’s hospitals as Pediatric Emergency Care Facilities (PECF) on December 30, 2011. Every Delaware acute care hospital that treats children voluntarily chose to participate in this new program. It required them to meet state standards, submit a lengthy application, and be visited by a state review team.

The committee reviewed documents adopted in other states such as Illinois, California, and Tennessee as models for the Delaware program.

Delaware hospitals are recognized as PECF Level I - III. There are one Level 1, one Level 2, and six Level 3 recognized facilities.

1. The Level 1 facility is capable of providing comprehensive specialized pediatric medical and surgical care to all types of ill children. This facility serves as a regional referral center for the specialized care of pediatric patients.

2. The Level 2 facility is capable of identifying and stabilizing critically ill or injured pediatric patients and providing ongoing inpatient care or appropriate timely transfer to a Level 1 facility.

3. The Level 3 facility is capable of identifying and stabilizing those pediatric patients who are critically ill or injured and providing appropriate timely transfer to a higher level of care. Level 3 facilities have capabilities for the management of minor pediatric inpatient illnesses.

4. The healthcare facility that has appropriately trained staff and equipment to take care of the child, or has the capability to transfer the child to a designated hospital that can provide definitive treatment, and help reduce children’s mortality and morbidity.

5. According to the EMSC National Resource Center, Delaware is only the 5th state in the USA to successfully implement the PECF Recognition Program. Delaware also is the 3rd in the nation to develop an inclusive pediatric system with all acute care hospitals that treat children recognized.

The healthcare facility that has appropriately trained staff and equipment to take care of the child, or has the ability to transfer the child to a designated hospital that can provide definitive treatment, and help reduce children’s mortality and morbidity.
