DELWARE HOSPITAL  
DISCHARGE SUMMARY  
REPORT ■ 2001-2004

*DELAWARE HEALTH AND SOCIAL SERVICES*  
Division of Public Health  
Health Information & Science

---

## **Acknowledgments**

This report was prepared by Barbara Gladders, Health Statistics Administrator of the Delaware Health Statistics Center, Division of Public Health, Department of Health & Social Services. Ed Ratledge, of the University of Delaware's Center for Applied Demography and Survey Research, created the hospital discharge research file and provided technical advice. Tony Ruggiero reviewed and provided feedback on the draft documents.

**This report describes:**

**Patient Demographics and Distribution**  
**Most Frequent Reason for Hospitalizations**  
**Patient Admissions**  
**Hospital Charges and Billing Patterns**  
**Patient Discharge Status**  
**Patient Distribution**

Data in this report will cover the most current (2001-2004) Delaware hospital discharge data, as well as trend data for selected characteristics. Hospitalization or hospital discharge, refers to any discharge from a non-federal, short-stay, acute-care hospital in Delaware. Hospitalizations are expressed as numbers of discharges, not as unduplicated patients; as a result, a single patient with multiple hospitalizations can be counted more than once. Delaware hospital discharge data are based upon inpatient hospitalizations and do not include outpatient, clinic, or emergency room data. Unless otherwise specified, the data presented represent discharges from the following hospitals and systems: A.I. duPont, St. Francis, Christiana Care Health System (consists of Wilmington and Christiana Care), Bayhealth Medical Center (consists of Kent General and Milford), Beebe, and Nanticoke.

More information on how annual files are created, as well as definitions of terms used in this report can be found in the Technical Notes.

Maps displaying patient distribution and hospital location are located in the Maps section.

**Key findings:**

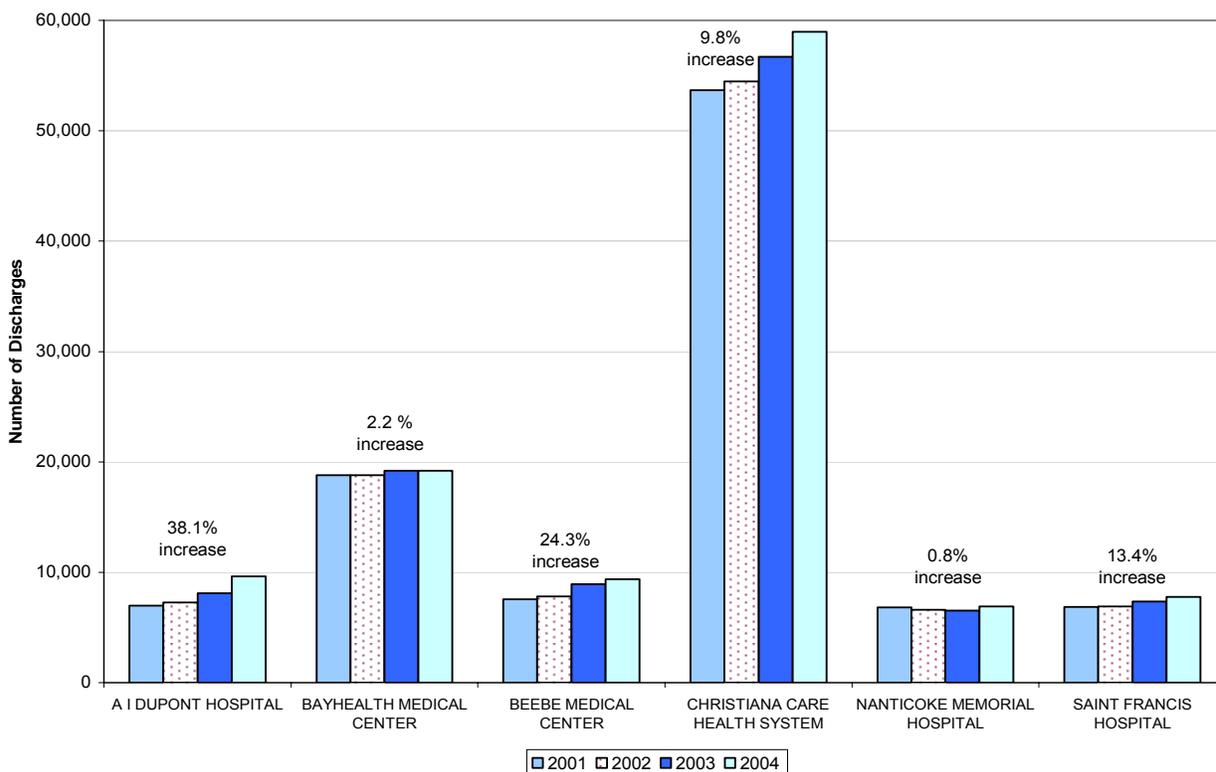

- There were over 100,000 discharges from acute care hospitals in Delaware in 2001. By 2004, that had increased by more than 11,000 to 111,806 discharges. During the same time, aggregate charges rose from almost \$1.1 billion to \$1.7 billion.
- During the 2001 to 2004 time period, the average length of stay was 4.9 days and the mean charge for a hospitalization was \$13,059.06.
- The maximum charges for each year from 2001 to 2004 were the result of infants suffering from birth defects, perinatal conditions, or complications due to short gestation and very low birth weight.
- Admissions from the Emergency department accounted for 48 percent of all hospital admissions from 2001 to 2004; 47 percent came from physicians, and the remaining 5 percent were admitted from clinics, HMOs, or transferred from other facilities.
- 74.6 percent of uninsured admissions come from emergency department.
- The most frequent reasons for hospitalization fell under the category of diseases and disorders of the circulatory system, and include heart attack, heart disease, and stroke.
- From 2001 to 2004, an average of 11,418 women per year delivered their children in Delaware hospitals.

- Hospital stays for liveborn infants vary by type of delivery and plurality.
  - The average length of stay (LOS) for infants delivered by cesarean section are almost twice that of infants delivered vaginally, and
  - The LOS for infants who are part of a plural birth is three times that of singleton births.

**Discharge trends by hospital:**

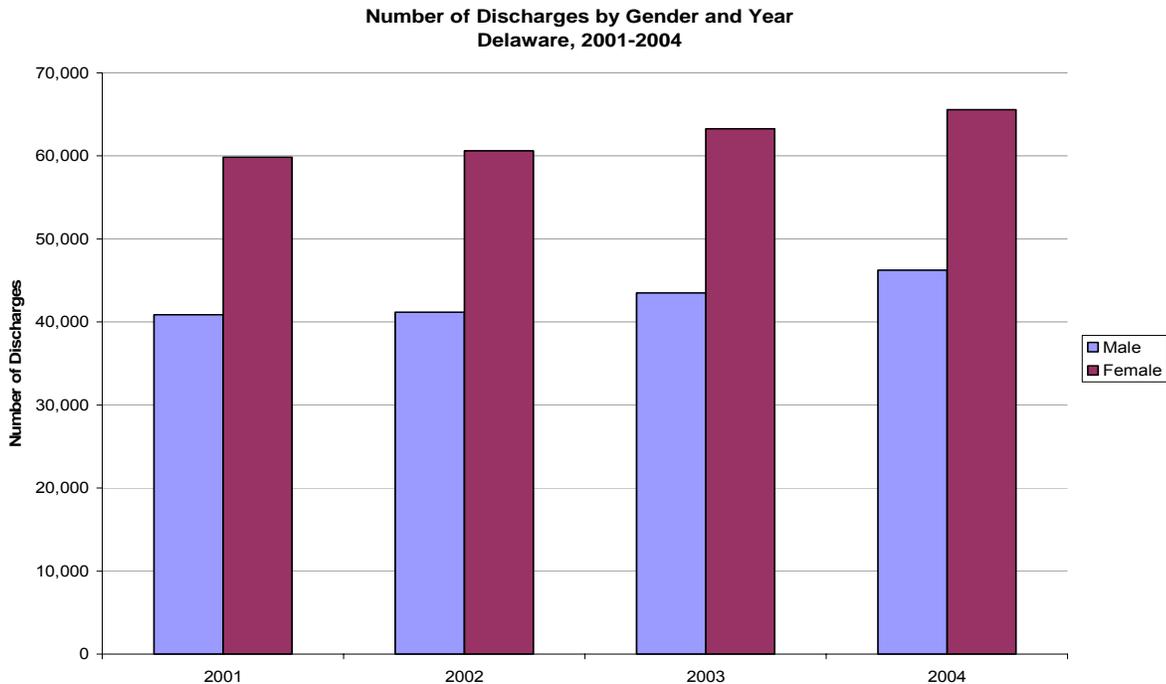

The number of hospital discharges increased by 11 percent from 2001 to 2004, increasing from 100,681 in 2001 to 111,806 in 2004. As the largest health care system in the state, Christiana Care Health System (CCHS) accounted for over half of the total annual discharges<sup>1</sup>. Though CCHS showed the largest numerical increase from 2001 to 2004, A.I duPont and Beebe Medical Center showed the largest percentage increases, at 38.1 and 24.3 percent, respectively.

**Number of Discharges by Hospital System and Year of Discharge  
Delaware, 2001-2004**

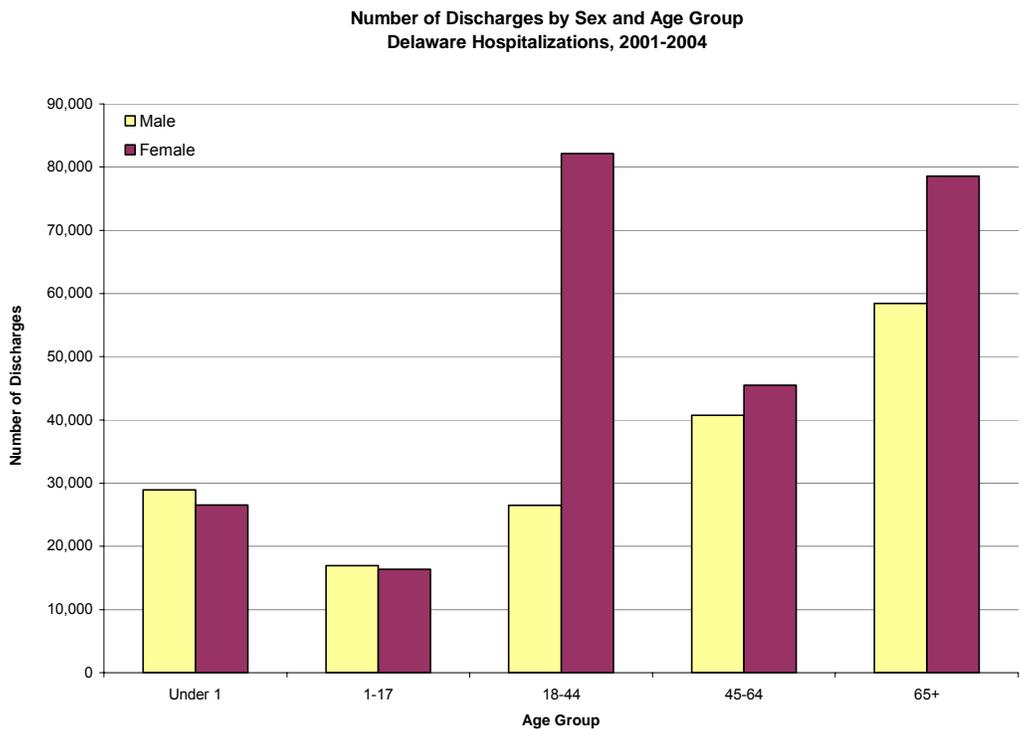

<sup>1</sup> See the Hospital Profiles at the end of this report for details on each of Delaware's acute care hospitals.

*The number of discharges for both women and men increased over the four year period; women continued to account for approximately 60 percent of all hospital discharges.*

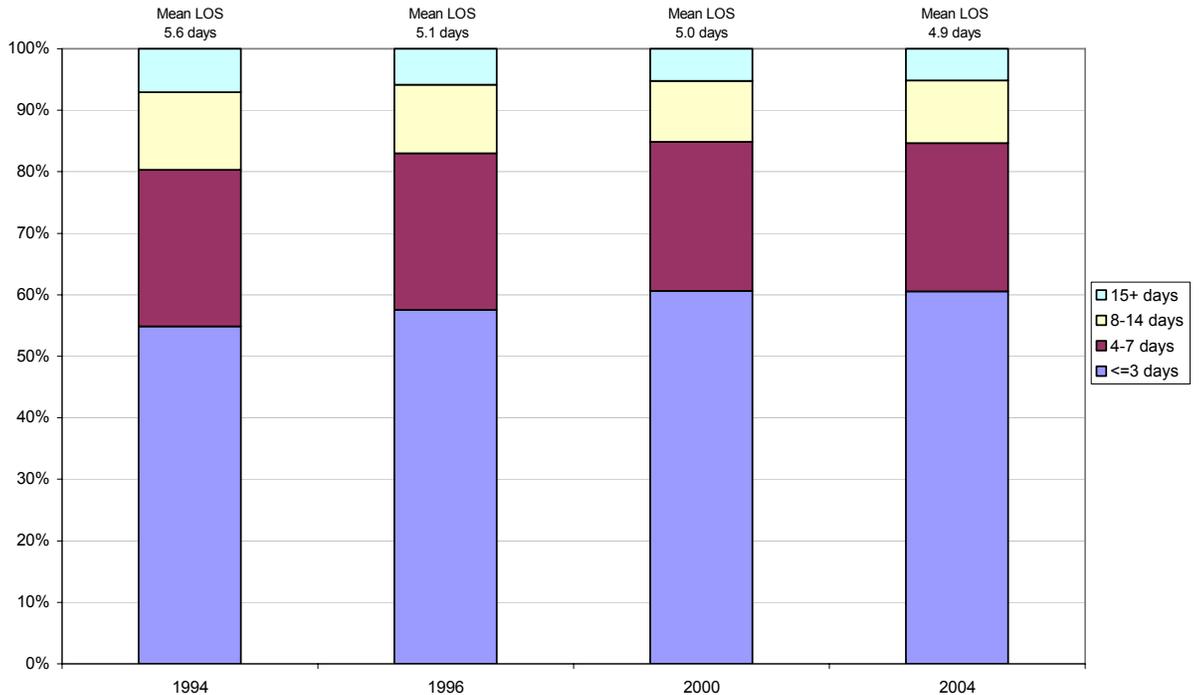

Patients over 65 accounted for 33 percent of those admitted to the hospital; 26 percent were ages 18- 44, and the remaining 41 percent were split almost evenly between those ages 45-64 and those under 18. With the exception of the under 18 age groups, there were more women than men in each age group. Three-quarters of patients ages 18-44 were women, primarily a result of those hospitalizations being related to pregnancy and childbirth (see page 6 for the most common reasons for hospitalizations of women).

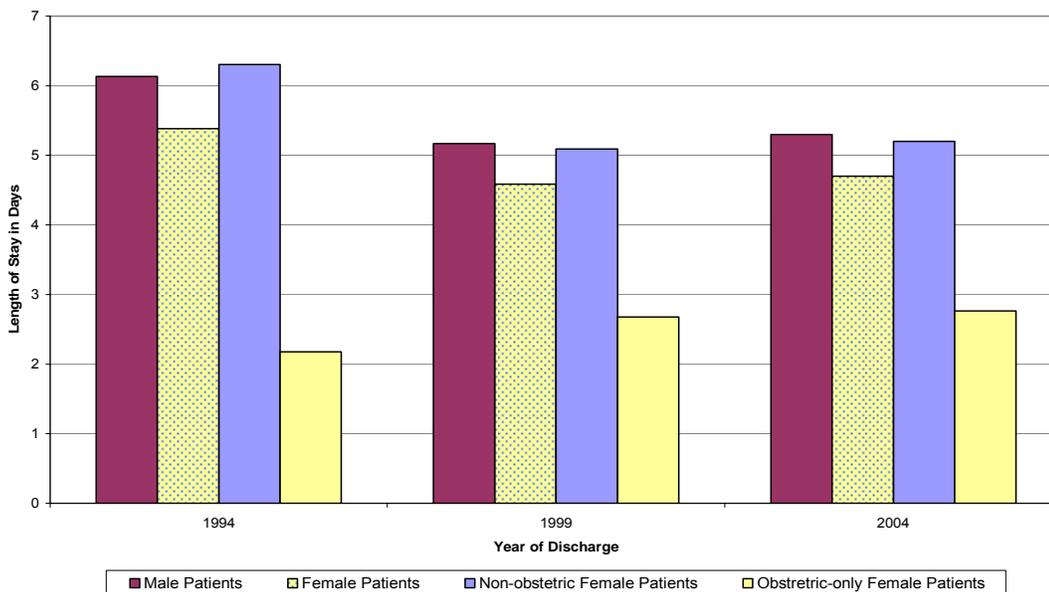

As the percent of patients staying three or fewer days in the hospital increased, the average length of stay decreased from 1994 to 2004. In 2004, patients in Delaware hospitals stayed an average of 4.9 days in the hospital.

**Percent Distribution of Hospital Discharges by Length of Stay (LOS)  
Delaware, Selected Years 1994-2004**

*While the average length of stay decreased 12.5 percent since 1994, the last five years have seen very little change in the average time one spends in the hospital. In 2004, the majority of patients (60 percent) had stays of 3 days or less.*

**Mean Length of Stay by Patient Type  
Delaware Hospitals, 1994-2004**

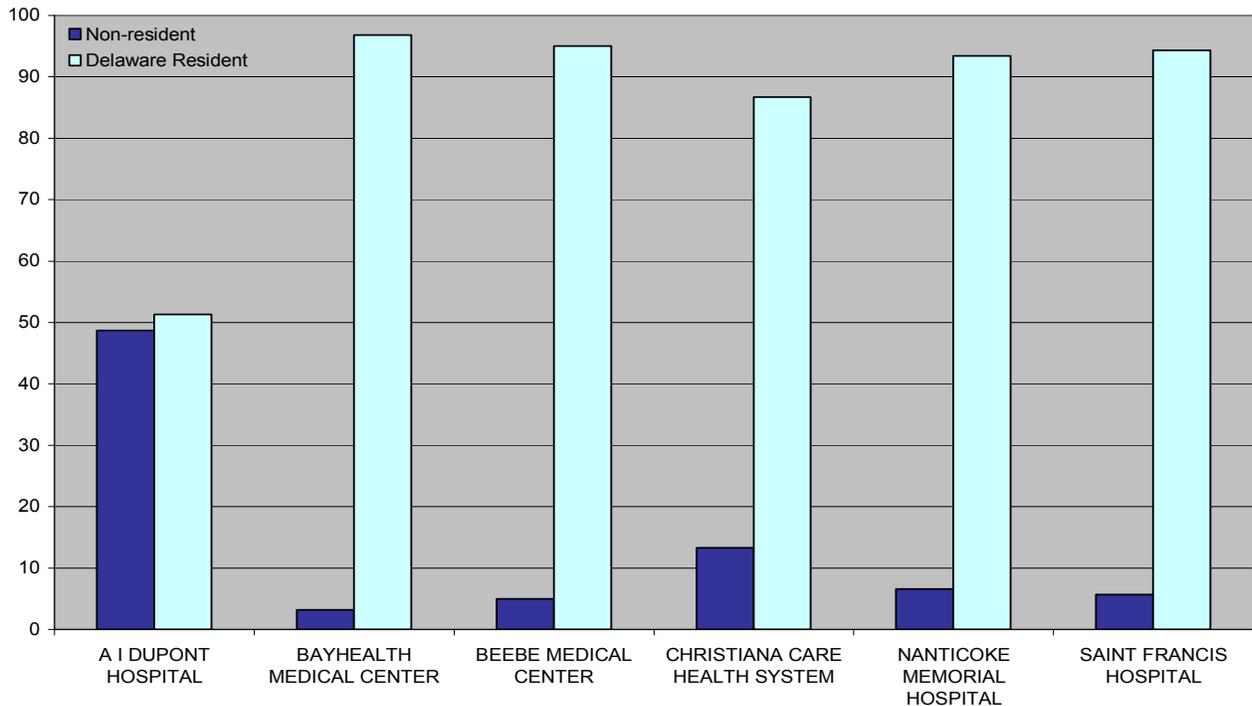

*Though male and female patients experienced similar decreases in mean LOS from 1994 and 2004, there was little or no change from 1999 to 2004. When female obstetrical patients were excluded from the calculation of average length of stay, male and female patients had very similar LOS figures in all time periods. Surprisingly, the only increase in LOS from 1994 to 2004 was seen in female obstetrical patients.*

On average, there were 105,264 hospital discharges per year, 87 percent of which were Delaware residents. Of the non-residents who used Delaware hospitals, Pennsylvania and Maryland residents had the highest number of discharges and accounted for 9 percent of the total average annual discharges.

With the exception of Christiana Care and A.I. duPont, fewer than 10 percent of patients admitted to Delaware hospitals came from out of state. Almost half of A.I. duPont's admissions came from a state other than Delaware.

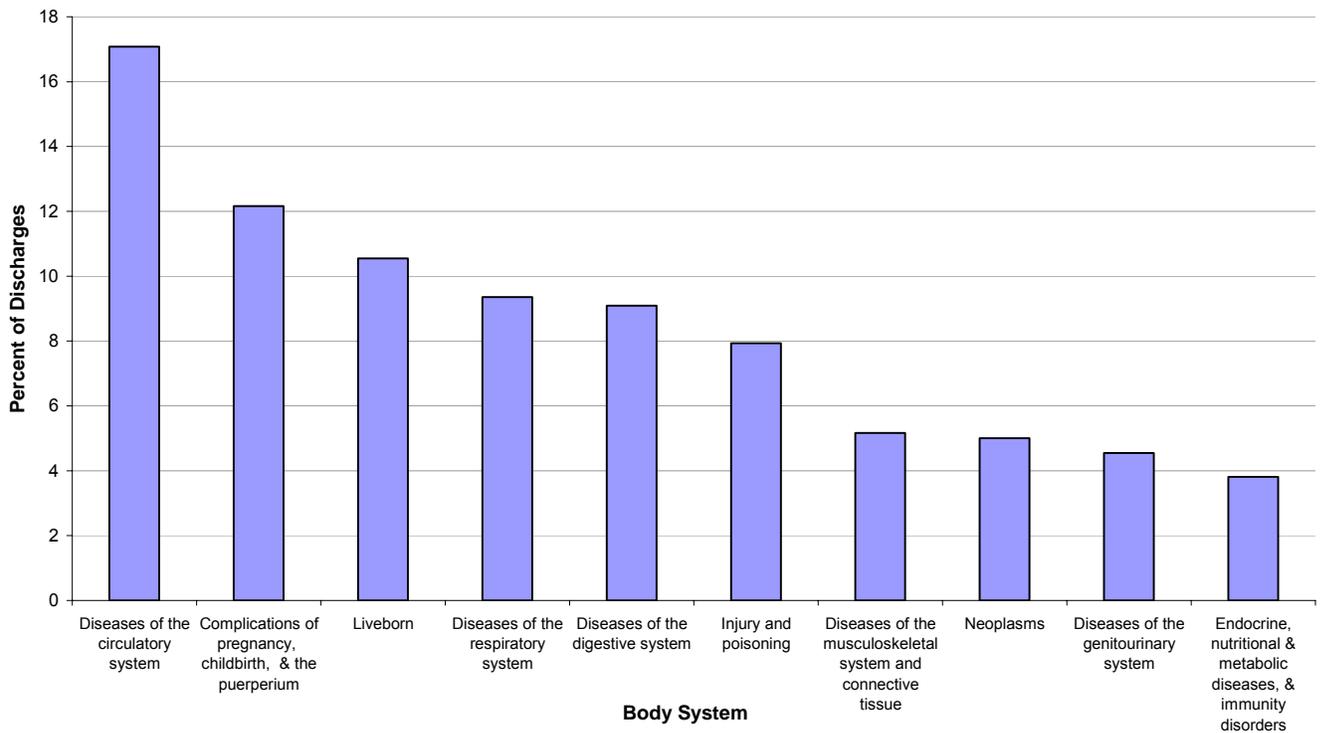

**Percent of Total Discharges by Residency and Hospital System  
Delaware, 2001-2004**

**Most frequent reasons for hospitalization by primary diagnosis and body system<sup>2</sup>:**

Diseases of the circulatory system accounted for 17.1 percent of the total discharges and represented the most common reasons for hospitalization, regardless of sex or age; some of the most common diagnoses in that category were heart failure, coronary atherosclerosis and other heart disease, heart attack, and chest pain. Pregnancy and childbirth comprised 12.2 percent of the total discharges, and 10.5 percent of all discharges were related to newborn infants (those infants admitted to the hospital by virtue of being born). Together, these three categories accounted for approximately 40 percent of all hospitalizations.

**Percent of Discharges by Body System  
Delaware Hospitals, 2001-2004**

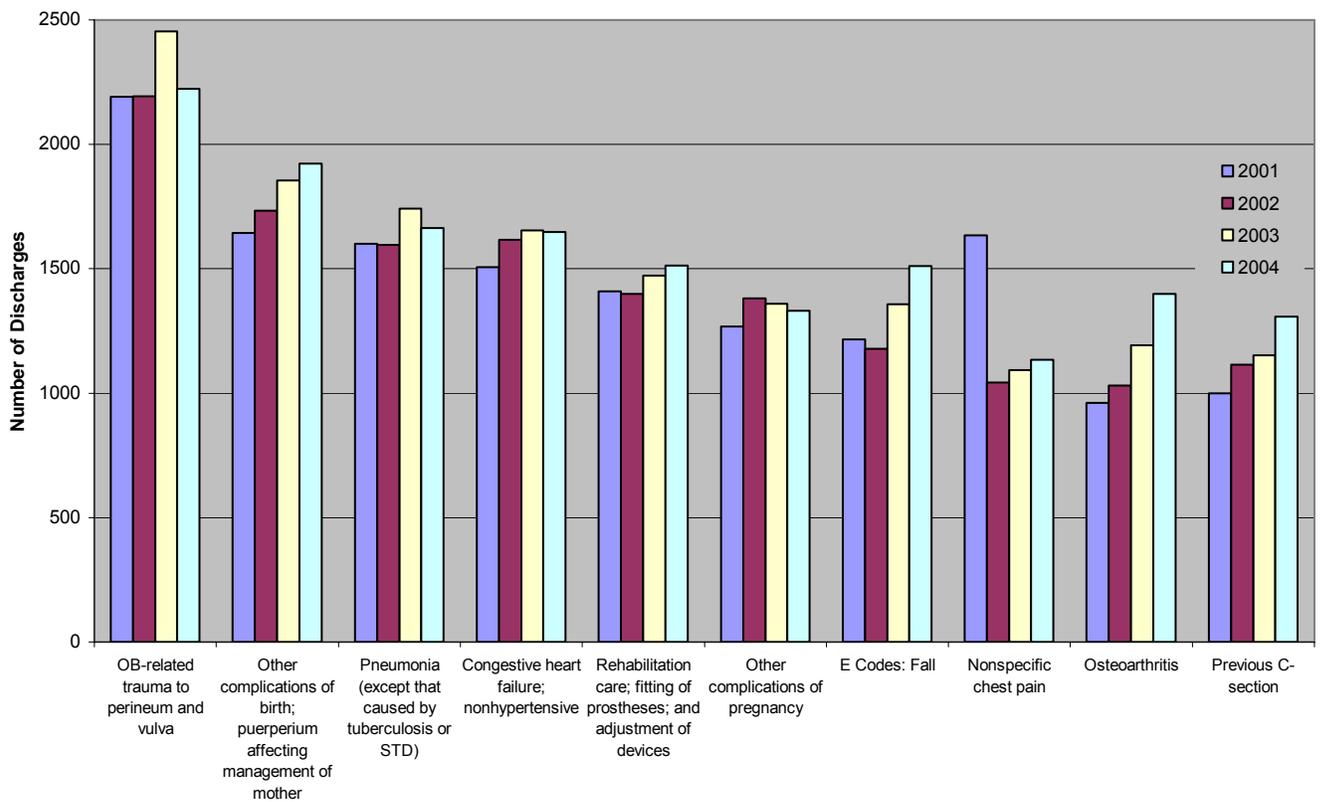

Although hospitalizations due to infections and parasitic diseases did not occur frequently enough for them to appear in the graph above, the largest percent increase (42.5) in hospitalizations from 2001 to 2004 occurred in the infections and parasitic diseases category. This increase was driven primarily by a rise in the number of septicemia hospitalizations. Diseases of the skin and subcutaneous tissue also demonstrated a large percentage increase (33.2) from 2001 to 2004, and at 30.4 percent, the third largest increase in hospitalizations was due to mental disorders. Affective disorders, such as depression and bipolar disorder, along with schizophrenia and other psychoses were the most significant contributors to the upward trend in diagnoses due to mental disorders (for a more detailed review of rates of depression, see the "Why Delaware Patients were Hospitalized" section).

<sup>2</sup> See Appendix A for details about the primary diagnoses and body system classifications.

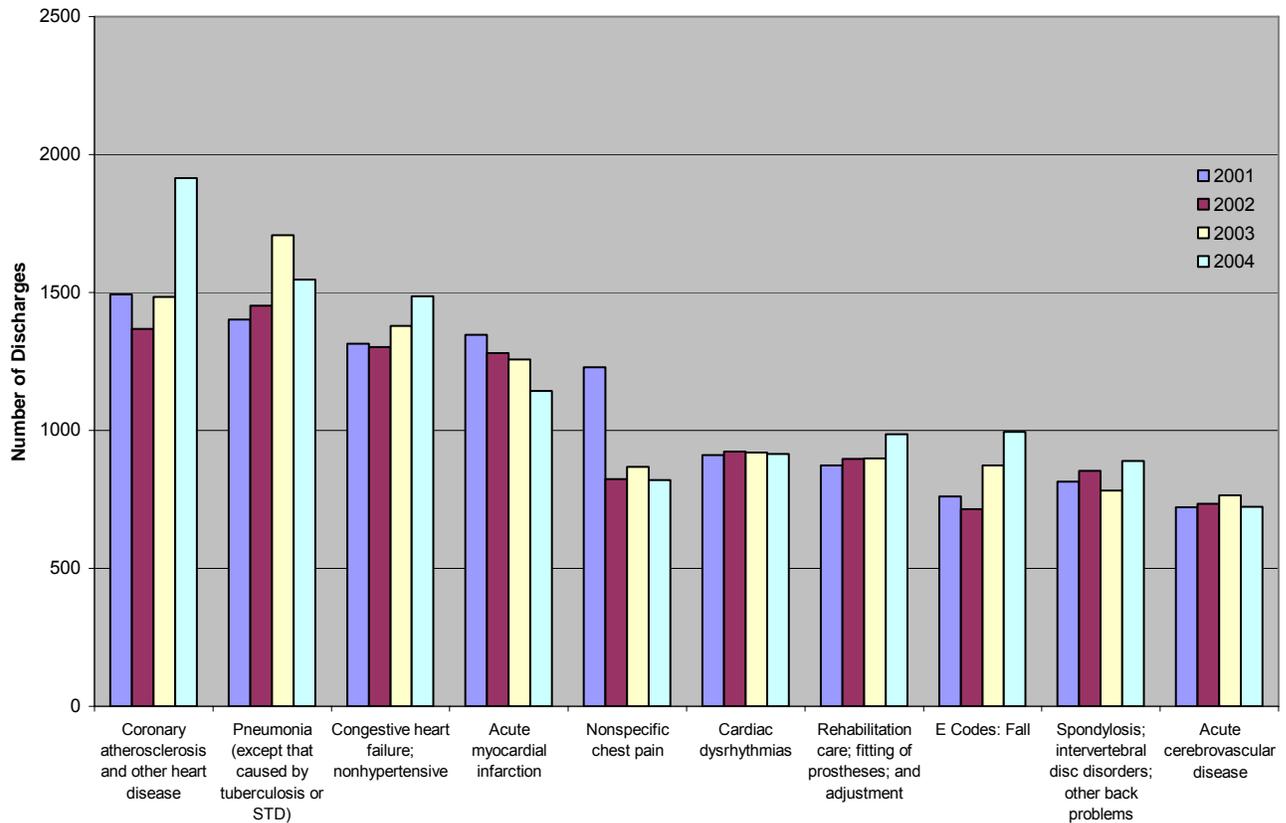

**Most frequent reasons for hospitalization by sex (excluding liveborn infants):**

Specific diagnoses varied by sex, but much of that was a result of the large number of women hospitalized due to pregnancy and delivery related conditions. Though 4 out the top 10 diagnoses for women were related to pregnancy and childbirth, men and women both experienced high numbers of discharges due to pneumonia (except that caused by tuberculosis and sexually transmitted diseases), congestive heart failure, chest pain, rehabilitation care (including fitting of prosthesis and adjustment of devices), and falls. The following two graphs show the 10 most frequent diagnoses for both men and women.

**Discharges of Women by Primary Diagnosis and Year  
Delaware Hospitals, 2001-2004**

Discharges of Men by Primary Diagnosis and Year  
Delaware Hospitals, 2001-2004

**Most frequent reasons for hospitalization by age groups:**

Though the most common reasons for hospitalization differ greatly by age, pneumonia appeared in the 10 most frequent diagnoses for all age groups (when pregnancy and childbirth were excluded from the 18-44 age group).

- Excluding liveborn infants, patients under 1 were hospitalized most often for bronchitis, cardiac and circulatory birth defects, and other perinatal conditions.
- For those ages 1 to 17, asthma, fluid and electrolyte disorders, and pneumonia made up the top three diagnoses.
- For those ages 18 to 44, the first 9 out of the top 10 diagnoses were associated with pregnancy and childbirth. If pregnancy and childbirth were excluded, motor vehicle accidents, back pain and disorders, and affective disorders become the three most common reasons for hospitalization.
- For those ages 45 to 64, coronary atherosclerosis and other heart disease, chest pain, and heart attack comprised the top three diagnoses.
- For those over 65, heart failure, pneumonia, and rehabilitation care were the top three diagnoses.

**Procedures:**

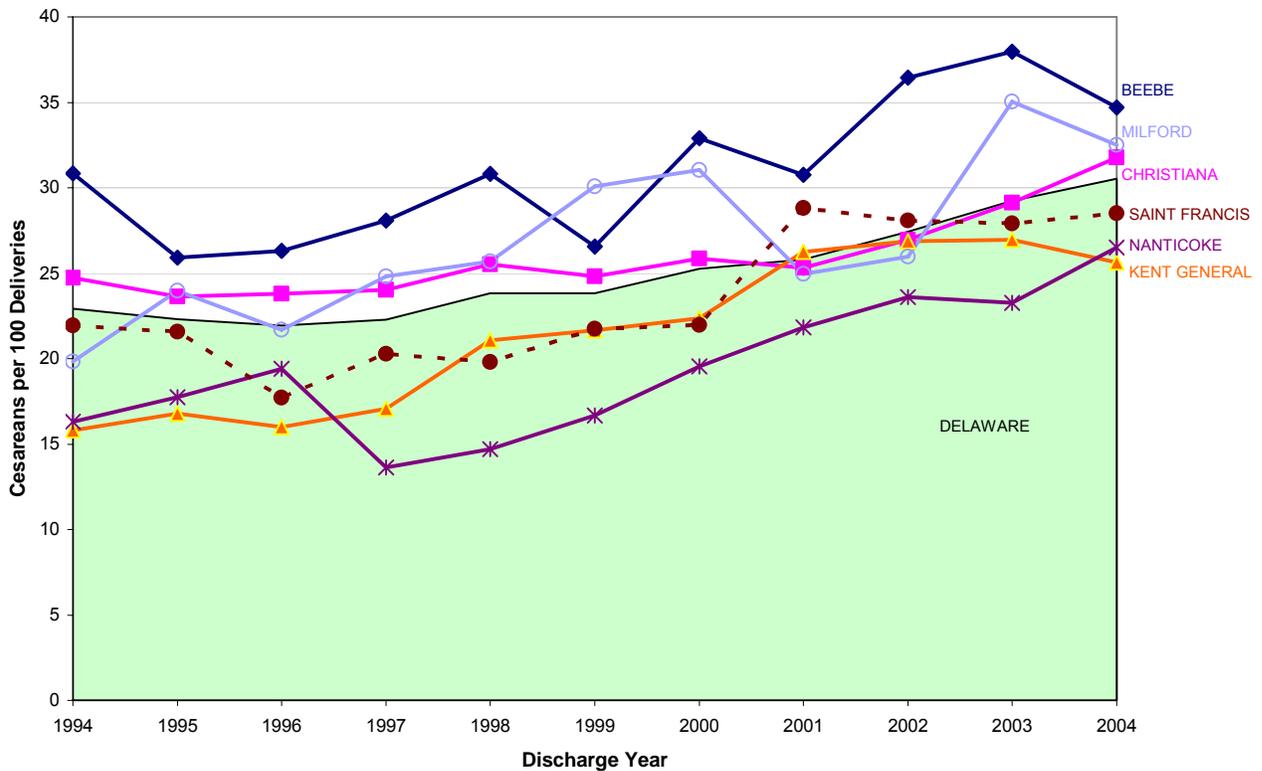

Sixty percent of hospital inpatients underwent a primary procedure. The most commonly performed procedures were:

- obstetrical, including procedures to assist delivery, cesarean section, and repair of current obstetric laceration,
- operations on the cardiovascular system, including diagnostic cardiac catheterization, percutaneous transluminal coronary angioplasty (PCTA), and other vascular catheterization, and
- operations on the digestive system, including upper gastrointestinal endoscopy, cholecystectomy and common duct exploration, and colorectal resection.

Thirty-one percent of the first-listed procedures performed on females were obstetrical, 14 percent were digestive, and 12 percent were cardiovascular. Twenty percent of the first-listed procedures performed on males were cardiovascular, 19 percent were genital (primarily newborn circumcisions) , and 16 percent were digestive<sup>3</sup>.

A major component of obstetrical procedures is related to cesarean delivery of newborn infants. Since 1994 annual cesarean delivery rates have increased for every hospital in Delaware; by 2004 30.5 of every 100 deliveries were cesarean. Milford, Nanticoke, and Kent General Hospitals have shown the greatest increases, at 63.8, 62.5 and 62.2 percent respectively. Though Beebe showed the smallest percent increase from 1994 to 2004, it continues to have the highest rate, at 34.7 cesareans per 100 deliveries in 2004.

**Annual Cesarean Delivery Rates by Hospital  
Delaware Hospitals, 1994-2004**

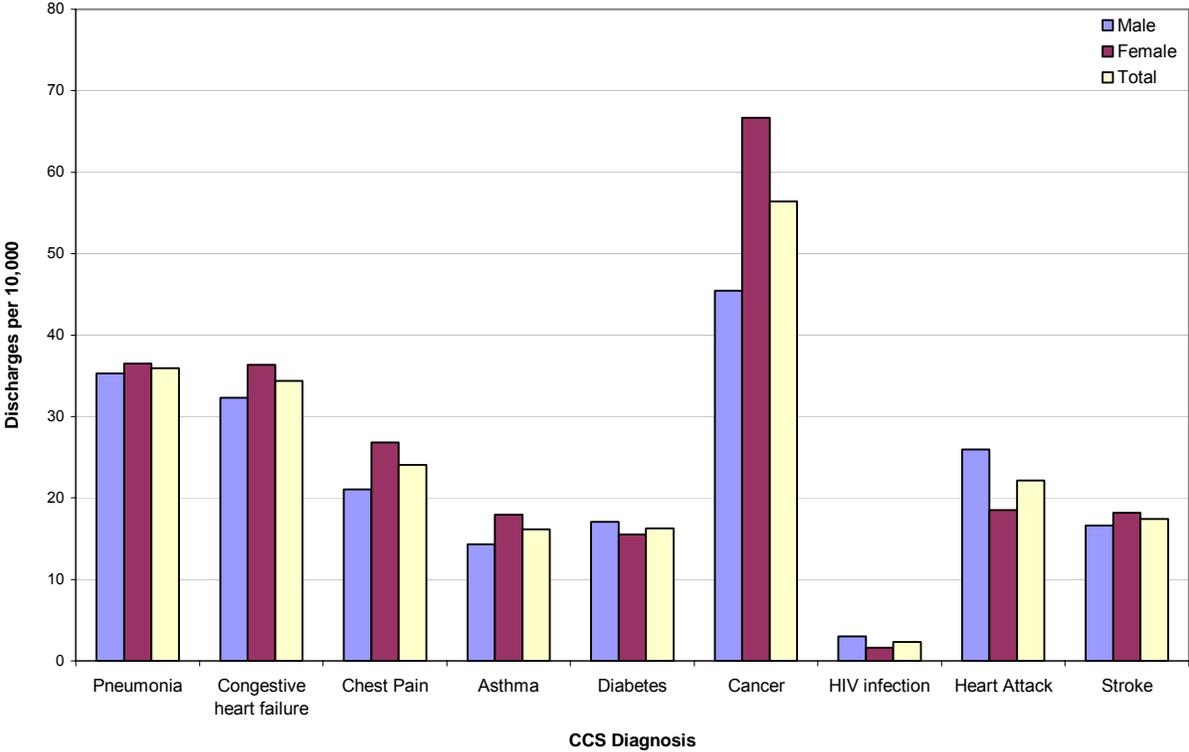

<sup>3</sup> See Appendix B for a table of first-listed procedures by sex.

**Hospital discharges of Delaware residents:**

Hospital discharge rates for Delaware residents should be interpreted with caution. The rates were calculated based on the number of discharges of Delaware residents from Delaware hospitals; they do not account for residents who obtained inpatient hospital services out of state.

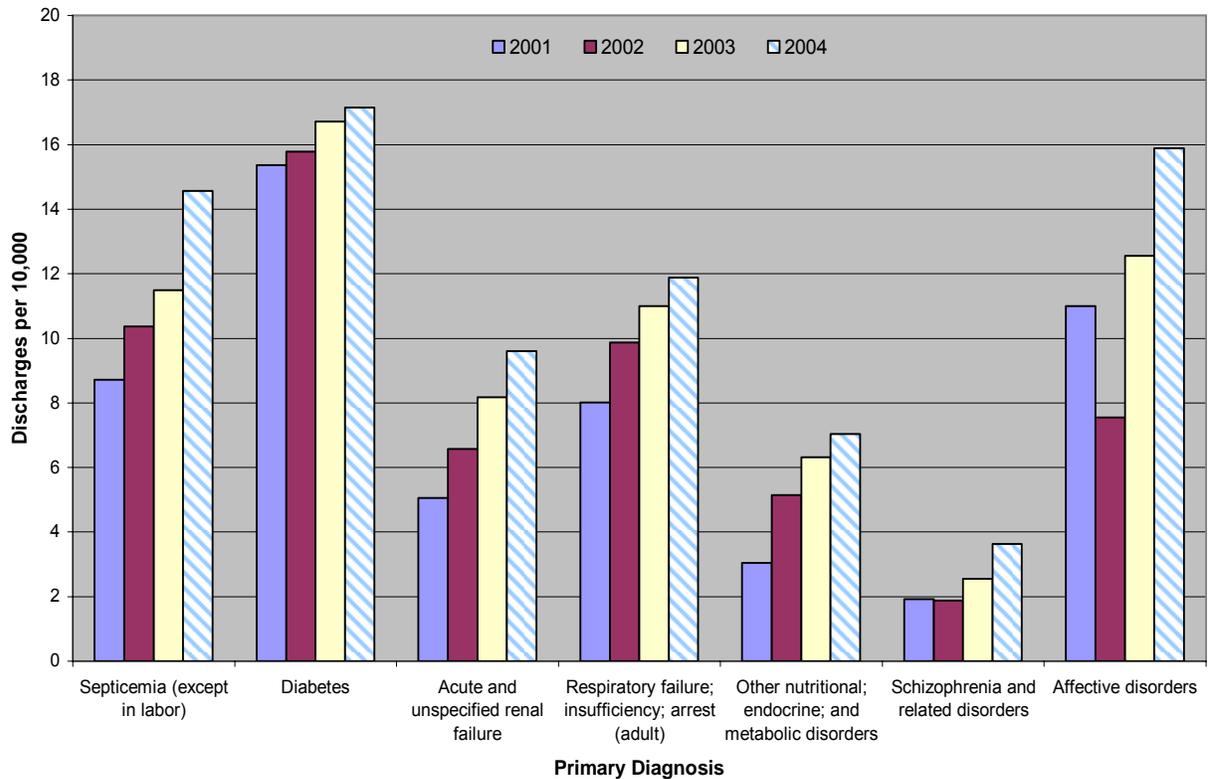

The graph below shows the four-year average discharge rates for men, women, and both sexes combined for diagnoses that represent some of the more high-profile diseases and disorders.

**Four-year Average Discharge Rates of Delaware Residents by Sex and Selected Primary Diagnoses  
Delaware Hospitals, 2001-2004**

Though diseases of the circulatory system are often thought to affect men more than women, the figures show women experienced higher hospitalization rates for diagnoses of heart failure, chest pain, and stroke. Out of the 9 selected diagnoses, only 3 show higher discharge rates for men: diabetes, HIV infection, and heart attack.

Annual Discharge Rates of Delaware Residents by Selected CCS Diagnoses  
Delaware Hospitals, 2001-2004

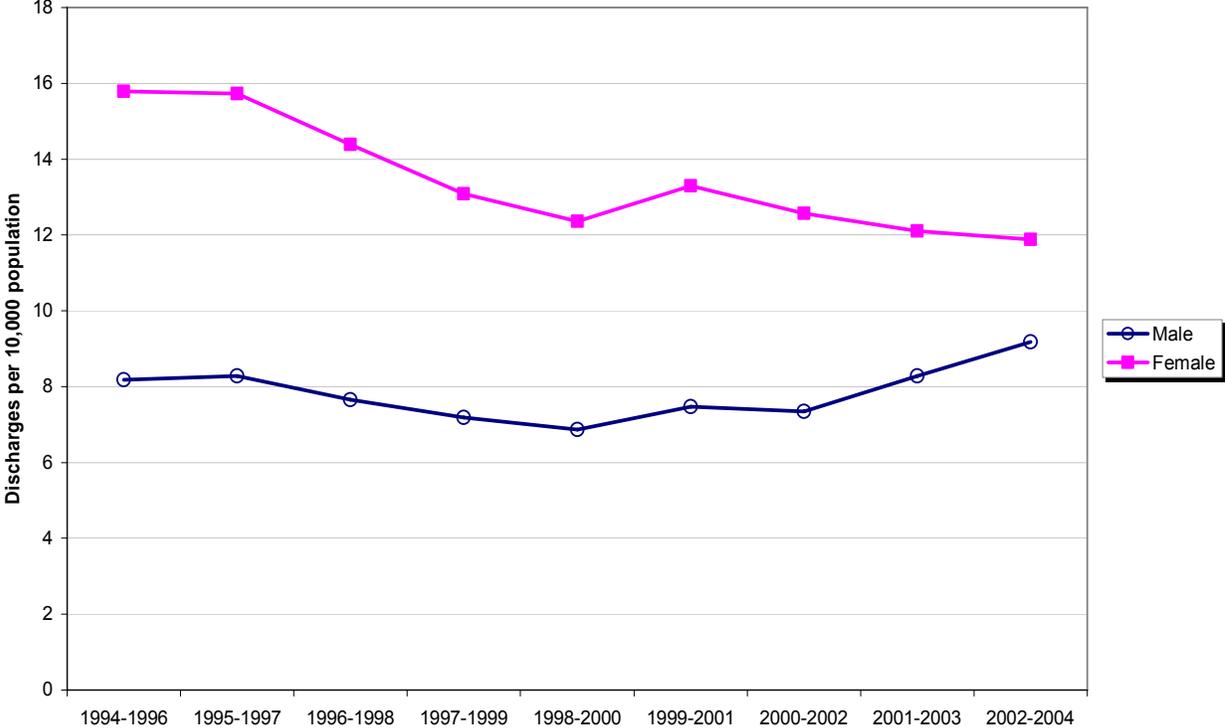

From 2001 to 2004, certain diagnoses demonstrated significantly large increases. The discharge rate for septicemia, a bacterial infection of the blood, increased 67 percent from 2001 to 2004. Both renal failure and schizophrenia increased by 90 percent, and the rate of other nutritional, endocrine, and metabolic disorders more than doubled.

CCS Diagnosis	2001		2002		2003		2004		% Difference from 2001 to 2004
	Number	Rate	Number	Rate	Number	Rate	Number	Rate	
Septicemia (except in labor)	694	8.7	836	10.4	940	11.5	1,210	14.6	67.0
Diabetes	1,222	15.4	1,273	15.8	1,368	16.7	1,424	17.1	11.6
Acute and unspecified renal failure	402	5.1	530	6.6	669	8.2	798	9.6	90.2
Respiratory failure; insufficiency; arrest (adult)	637	8.0	796	9.9	900	11.0	987	11.9	48.4
Other nutritional; endocrine; and metabolic disorders	242	3.0	415	5.1	517	6.3	584	7.0	131.2
Schizophrenia and related disorders	153	1.9	151	1.9	209	2.6	302	3.6	89.1
Affective disorders	875	11.0	608	7.5	1,027	12.6	1,320	15.9	44.5

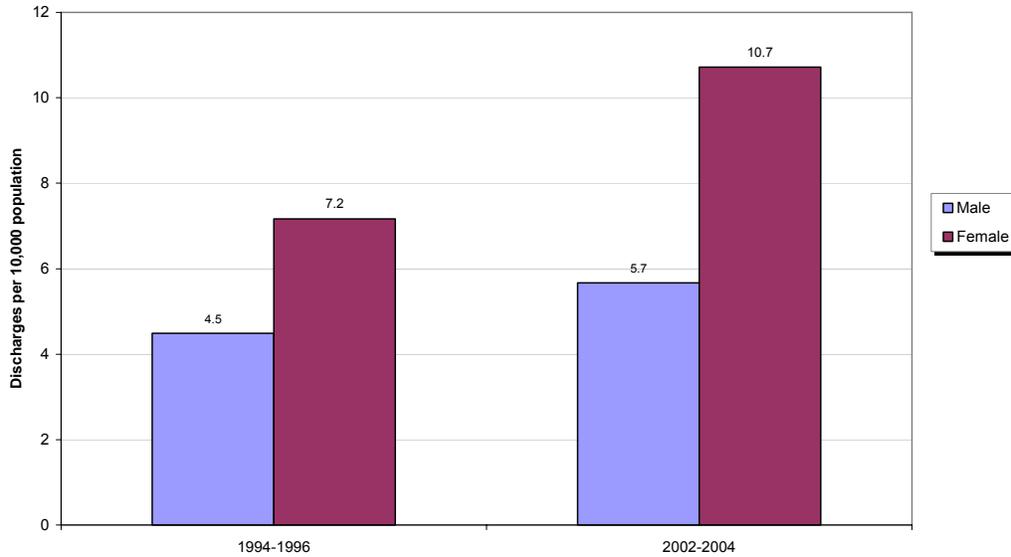

Looking more closely at rates of hospitalization for depression<sup>4</sup> among men and women shows distinct differences between the sexes and various age groups of patients. Though women have consistently shown higher hospitalization rates for depression than men, women's rates have been steadily decreasing since the 1994-1996 time period, while men's rates have been increasing slightly since the 1998-2000 time period, with the result that the rates are moving closer to convergence.

**Three-year Average Hospitalization Rates for Depression by Sex  
Delaware, 1994-2004**

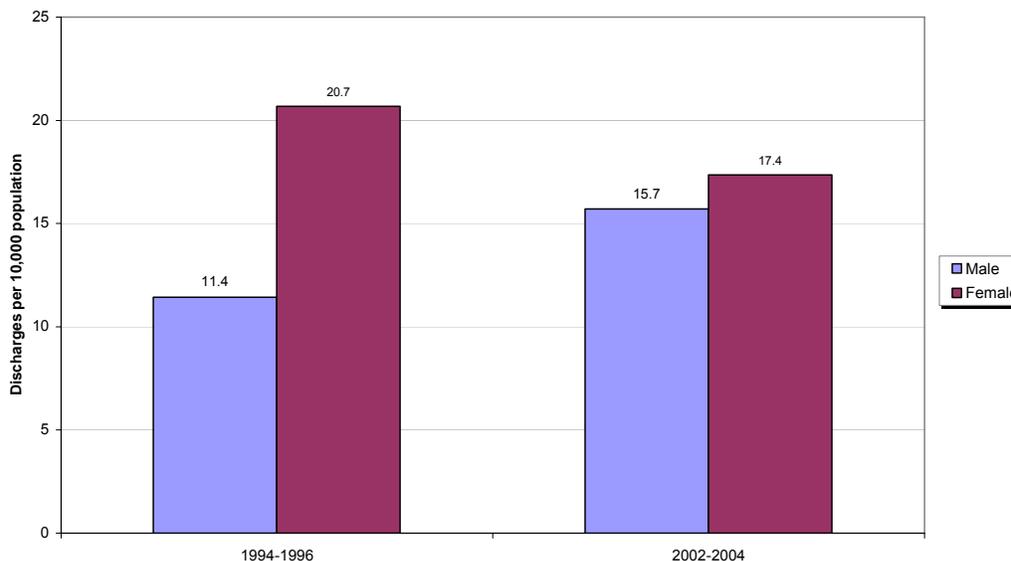

<sup>4</sup> Depression was defined as a first listed diagnosis of ICD-9-CM codes 296.2-296.3, 298.0, 300.4, 301.12, 309.0-309.1, 311, or 313.1. Hospitalizations for depression do not include data from psychiatric facilities.

**Three-year Average Hospitalization Rates for Depression Among Adolescents Aged 10-19 Years, by Sex Delaware, 1994-1996 and 2002-2004**

Rates for females in every age group declined from 1994-1996 to 2002-2004, with the exception of females aged 10-19 years, whose rates increased by 50 percent to 10.7 per 10,000 population in 2002-2004. Rates for males of the same age also increased, though by about half as much, rising 26.7 percent to 5.7 per 10,000 in 2002-2004. The greatest increase in male rates occurred in the 35-49 year-old age group, which increased 37.2 percent to 15.7 per 10,000 in 2002-2004.

**Three-year Average Hospitalization Rates for Depression Among People Aged 35-49 Years, by Sex Delaware, 1994-1996 and 2002-2004**

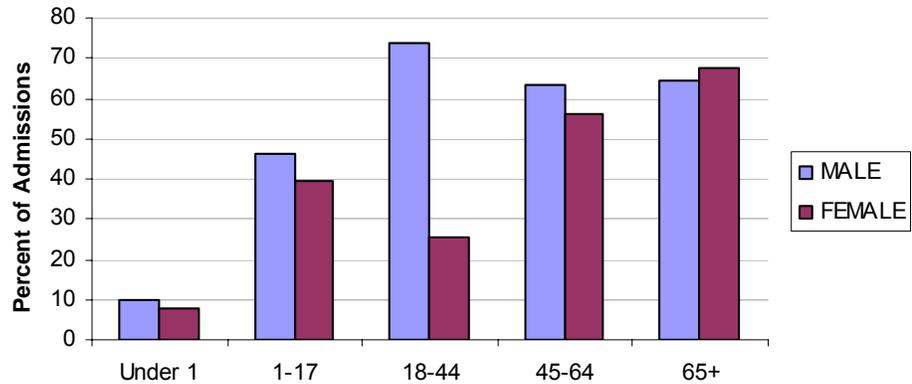

*The only age group to show a decrease in depression hospitalization rates for both sexes was the 65 and older age group. The rate for males decreased by 49.3 percent to 6.0 and the female rate decreased by 63.6 percent to 8.2.*

**Source of admissions:**

Routine and emergency admissions were split almost equally, with admissions from physicians and the emergency department (ED) accounting for 95 percent of all hospital admissions from 2001 to 2004; the remaining 5 percent were admitted from clinics, HMOs, or transferred from other facilities. Over one-fifth of all admissions originating from physicians were for normal deliveries.

*Though more women than men were admitted through the emergency department, males had a higher percentage of their admissions come from the ED, particularly in the 18-44 age group.*

**Percent of Male and Female Admissions that Originated in the Emergency Department Delaware, 2001-2004**

Patients who were uninsured were more frequently admitted through the emergency department than any other route; 74.6 percent of uninsured patients were admitted through the emergency department. At \$13,848, the average charge for a hospitalization originating in the ED was similar to the average charge for all types of admissions, though higher than routine admissions through a physician.

<b>Average Charge by Source of Admission</b>				
SOURCE OF ADMISSION	Total Charges		Discharges	
	Mean	Number	Number	Percent
PHYSICIAN	\$ 10,627.71	197,575	46.9	
CLINIC	\$ 23,441.77	9,252	2.2	
HMO	\$ 26,745.78	425	0.1	
TRANSFER FROM A HOSPITAL	\$ 33,009.81	10,186	2.4	
TRANSFER FROM SKILLED NURSING FACILITY	\$ 20,446.93	436	0.1	
TRANSFER FROM OTHER FACILITY	\$ 23,000.56	951	0.2	
EMERGENCY ROOM	\$ 13,848.28	201,816	47.9	
COURT/LAW ENFORCEMENT	\$ 13,991.01	67	0.0	
UNKNOWN	\$ 22,404.65	349	0.1	
<b>Total</b>	<b>\$ 13,059.06</b>	<b>421,057</b>	<b>100</b>	

The most common diagnoses of patients admitted through the emergency department were pneumonia, congestive heart failure, chest pain, falls, and acute myocardial infarctions (heart attack).

<i>ED Admissions - Most Common Diagnoses</i>		
	<i>Frequency</i>	<i>Percent*</i>
1 Pneumonia (except that caused by tuberculosis or sexually transmitted disease)	10533	5.2
2 Congestive heart failure; nonhypertensive	10077	5.0
3 Nonspecific chest pain	7861	3.9
4 E Codes: Fall	7608	3.8
5 Acute myocardial infarction	6295	3.1
6 Coronary atherosclerosis and other heart disease	5850	2.9
7 Acute cerebrovascular disease	5752	2.9
8 Chronic obstructive pulmonary disease and bronchiectasis	5433	2.7
9 Cardiac dysrhythmias	5255	2.6
10 Fluid and electrolyte disorders	4745	2.4

\* Refers to the percent of all discharges admitted through the emergency department.

The diagnoses that had the majority of their admissions come from the emergency department were very different from the ones that made up the most common diagnoses. Not surprisingly, 98.5 percent of all firearm injuries, 96 percent of all poisonings, and 94.7 percent of all motor vehicle injuries were admitted through the ED.

**Cost of hospitalizations:**

The total charges for a hospital discharge represent the total amount billed for that particular stay. These charges include accommodations, ancillary services (e.g. pharmacy, lab, radiology and anesthesiology), and services of resident physicians. In this report, hospital charges for care are reported, not the actual costs of providing the care or what the hospitals were reimbursed.

The average charge for a hospital stay in 2004 was \$15,222. At \$8,464, median charges for 2004 were considerably lower, illustrating how the average can be skewed by extremely high charges, such as the 13 discharges with total charges of over \$1,000,000.00.

The diagnostic groups with the highest average charges per hospital stay were congenital anomalies, perinatal conditions, and infections and parasitic diseases, with average charges ranging from \$20,000 to \$50,000. These three diagnostic groups also had the longest average stays, ranging from 8 to 11 days.

Looking at specific diagnoses within groups shows that the most expensive diagnoses were spinal cord injuries, disorders of lipid metabolism, and cardiac and circulatory anomalies. However, the 10 most expensive diagnoses occurred relatively rarely and accounted for less than 1 percent of all discharges from 2001 to 2004.

**Top 10 Diagnoses with the Highest Average Charges for a Hospital Stay  
Delaware Hospitals, 2001-2004**

<u>Single-level CCS Diagnoses</u>	<u>Average Charge</u>
Spinal cord injury	\$ 385,039.55
Disorders of lipid metabolism	\$ 110,214.98
Cardiac and circulatory congenital anomalies	\$ 76,962.14
Intracranial injury	\$ 74,487.20
Nervous system congenital anomalies	\$ 63,793.24
Leukemias	\$ 59,255.25
Immunity disorders	\$ 55,954.35
Cystic fibrosis	\$ 55,313.23
Heart valve disorders	\$ 54,649.63
Crushing injury or internal injury	\$ 52,940.87

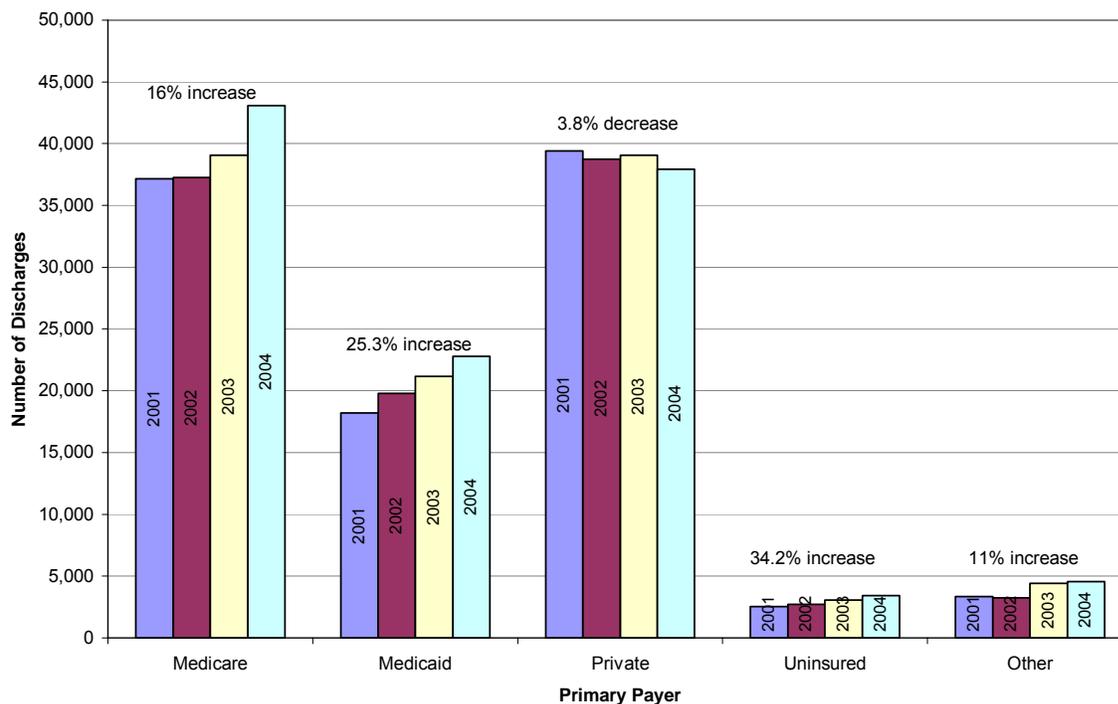

**Insurance status:**

The following payer sources are listed in this report:

- Medicare
- Medicaid
- Private insurance carriers, such as:
  - Blue Cross Blue Shield
  - HMOs
  - Commercial Insurance
- Uninsured
  - Patients who have no insurance and self pay
- Other types of insurance, such as:
  - Workman's compensation
  - CHAMPUS (Civilian Health and Medical Program of the Uniformed Services)
  - Other government sponsored programs

Medicare, Medicaid, and private insurance accounted for 93 percent of all billed charges. With the exception of patients whose primary insurance was private, the number of discharges billed to each primary insurance carrier increased from 2001 to 2004.

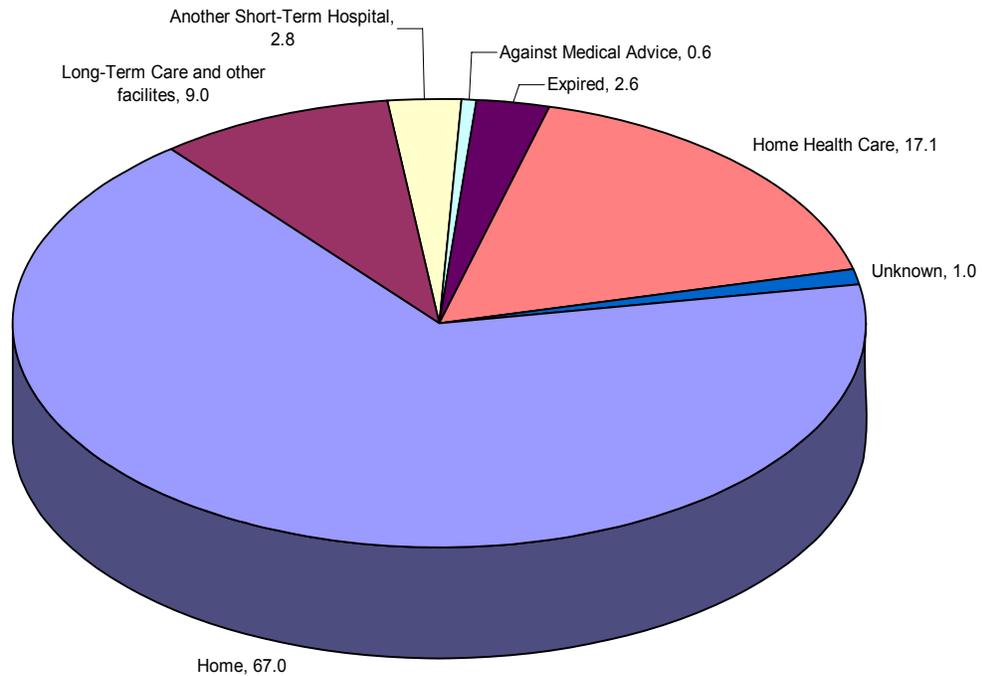

**Number of Discharges by Primary Insurance and Year  
Delaware Hospitals, 2001-2004**

**Patient discharge status:**

A patient’s discharge status refers to how a person is discharged from the hospital, and includes discharges to home, long-term care and other non-acute care facilities, other short-term hospitals, patients who left against medical advice, and patients who died while in the hospital. The majority of patients (67 percent) from 2001 to 2004 were discharged to their homes, less than 3 percent of patients died in the hospital, and fewer than 1 percent left against medical advice.

**Percent of Discharges by Discharge Status  
Delaware Hospitals, 2001-2004**

**Expired patients:**

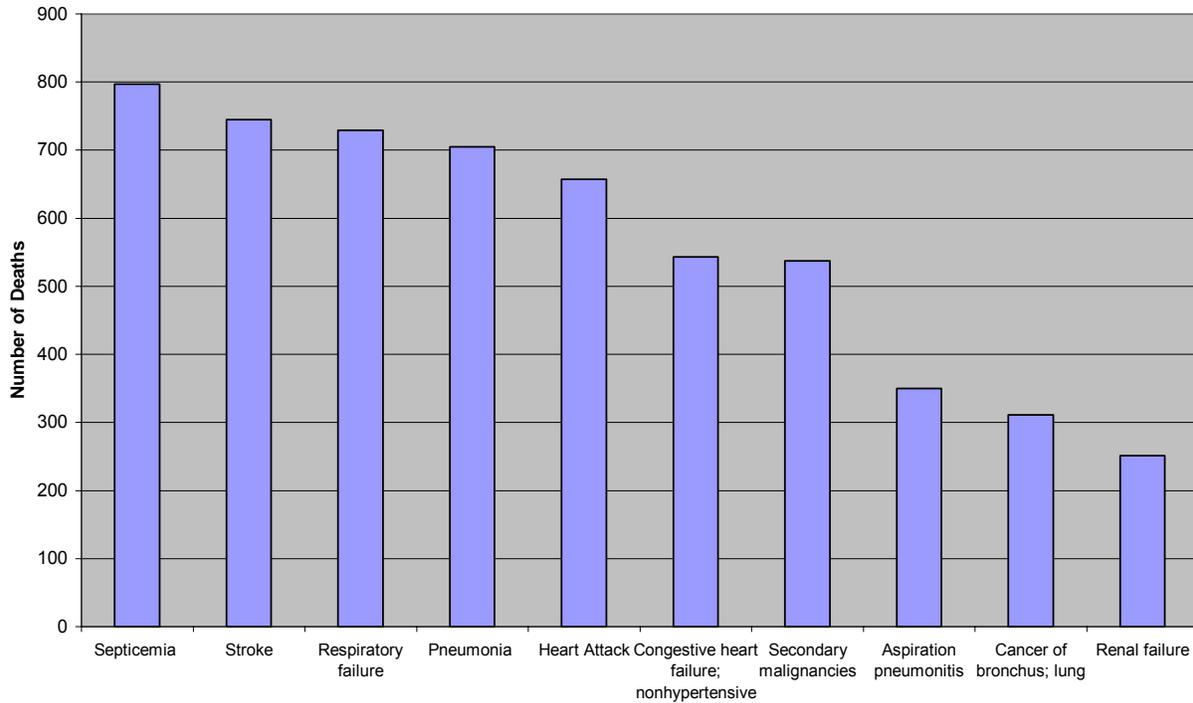

Patients who died during their hospital stay contributed to the “in-hospital mortality” figures. Data about in-hospital mortality are expressed as either numbers of deaths, or percentages of deaths. Both the frequencies and percentages are presented, as each statistic provides a different perspective for reviewing the data.

**Frequencies**

Patients with the following diagnoses experienced the highest numbers of in-hospital mortality:

- septicemia,
- acute cerebrovascular disease,
- and respiratory failure.

**Diagnoses with the Greatest Numbers of In-Hospital Deaths  
Delaware Hospitals, 2001-2004**

Age affects which diagnoses contribute to the largest numbers of deaths.

- For those under 1, low birthweight and prematurity accounted for the highest number.
- For those ages 1-17 and 18-44, motor vehicle accidents accounted for the highest number of deaths.
- For those ages 45-64, secondary malignancies accounted for the highest number of deaths, and
- For those 65 and older, septicemia accounted for the highest number of deaths.

Septicemia was the only diagnosis to appear in the top 10 list for each age group<sup>5</sup>, from those under 1 to those ages 65 and older. Patients ages 65 and older accounted for 71 percent of all in-hospital mortality<sup>6</sup>.

**Percentages**

Those diagnoses with the greatest percentages of in-hospital mortality were:

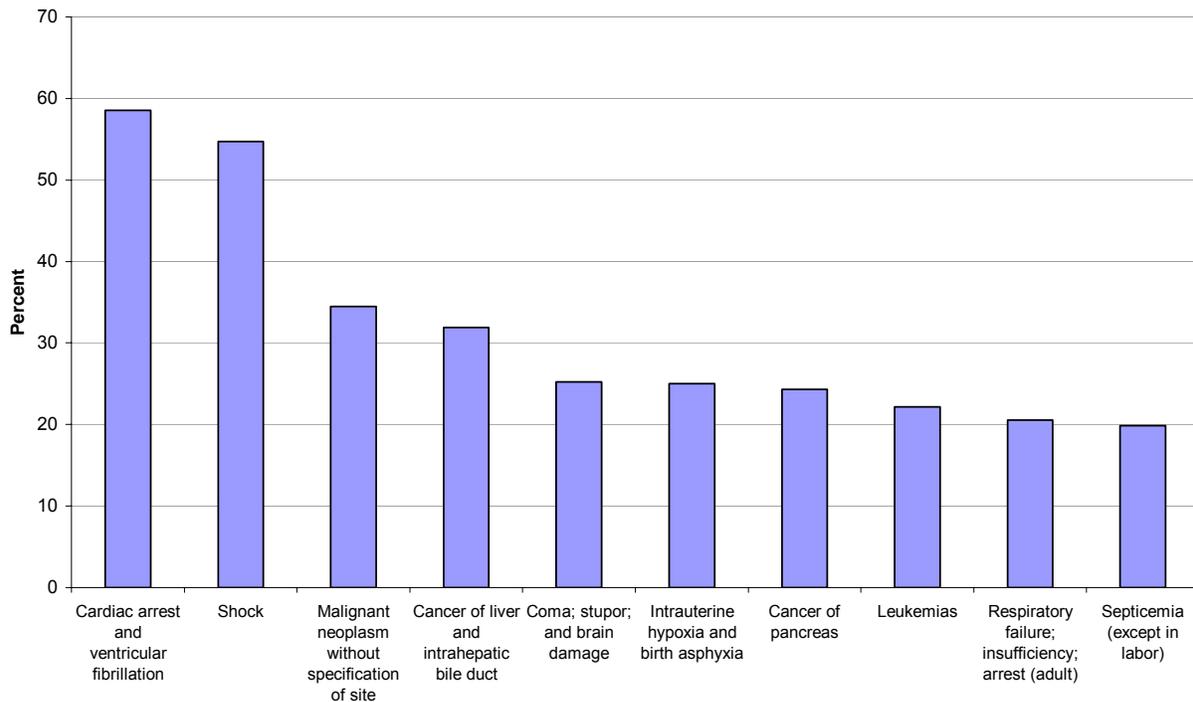

- cardiac arrest and ventricular fibrillation,
- shock, and
- cancer without specification of site.

<sup>5</sup> See Appendix C for the top 10 list of conditions by age group.

<sup>6</sup> See Appendix D for detailed graph.

Four out of the ten diagnoses with the greatest percentages of in-hospital mortality are cancer related, and include cancer without specification of site, liver cancer, pancreatic cancer, and leukemias.

**Diagnoses with the Greatest Percent of In-Hospital Mortality  
Delaware Hospital, 2001-2004**

**Patients who left against medical advice:**

Of those patients who left the hospital against medical advice, 52.5 percent were ages 18-44 and 58.2 percent were male. In the 18-44 age group, 2.5 percent of men left the hospital against medical advice, more than three times the percent of women.

The three most frequent diagnoses of patients who left the hospital against medical advice were nonspecific chest pain, diabetes with complications, and alcohol-related mental disorders. Only one of the top three diagnoses changed when patients were separated by gender.

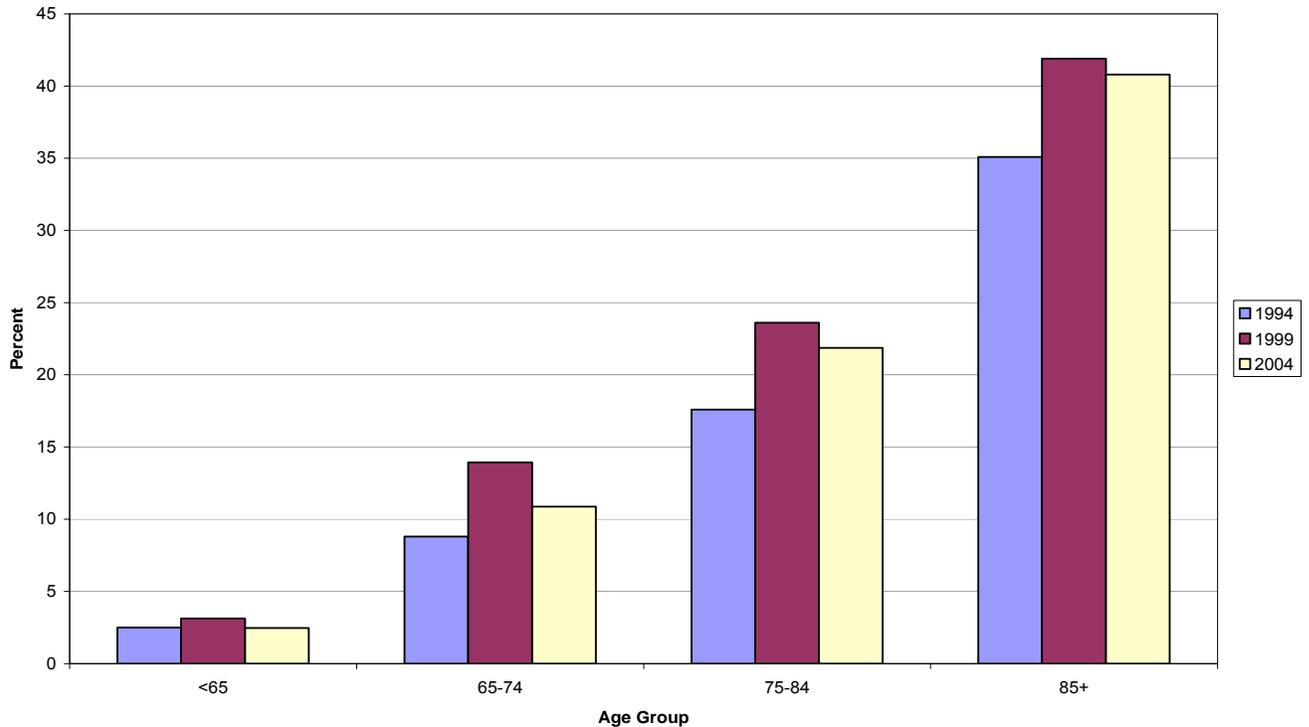

- For women, nonspecific chest pain, early or threatened labor, and diabetes with complications made up the top three.
- For men, alcohol-related mental disorders, nonspecific chest pain, and diabetes with complications made up the top three.

**Patients transferred to another facility:**

The majority of patients discharged to another facility were transferred to a long-term care facility (LTC). With each 10 year increase in age of patients 65 and older, the percentage of those transferred to long-term care facilities almost doubles.

With the exception of the under 65 age group, the percent of patients transferred to a long-term care facility has increased significantly since 1994. By 2004, 10.9 percent of patients aged 65-74, 21.9 percent of patients aged 75-84, and 40.8 percent of patients 85 and older were discharged to a long-term care facility.

**Percent of Patients Transferred to a Long Term Care or Other Similar Facility by Age Group  
Delaware Hospitals, 1994-2004**

- In 2004, the most common diagnoses for patients transferred to long-term care facilities were falls, pneumonia, and heart failure<sup>7</sup>. Though these same diagnoses were included in the 10 most common diagnoses in 1994, only pneumonia was one of the top 3; stroke and osteoarthritis occupied the number 1 and number 3 spots.
- The most common procedures in 2004 that resulted in patient transfers to long-term care facilities were vascular catheterization, treatment for hip fracture or dislocation, and upper gastrointestinal endoscopy. In 1994, the most common procedures resulting in patient transfers to long-term care facilities were treatment for hip fracture or dislocation, hip replacement, and knee arthroplasty.

<sup>7</sup> See Appendix E for the top 10 list of diagnoses by age group.

**Clinical Classification System:**

Diagnoses and procedures were coded according to the International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM). These codes were then aggregated into broader diagnostic categories using the Clinical Classification System (CCS) developed by the Agency of Healthcare Research and Quality (AHRQ). The CCS diagnoses are used to categorize clinically similar diagnoses for ease in presentation and interpretation of hospital discharge data. A complete listing of CCS diagnostic codes and selected corresponding measures are presented below.

**Number and Percent of Discharges, Mean Length of Stay, Mean Charges, Percent Expired, and Percent Admitted from the ED by Principal Diagnosis  
Delaware Hospitals, 2001-2004**

<i>Clinical Classifications Software Categories and Chapter Headings</i>	Number of Discharges	Percent of Discharges	Mean LOS	Mean Total Charges	Percent Expired	Percent Admitted from ED

## Alfred I. duPont Hospital for Children Profile

Introduction:

*Name*

Alfred I. duPont Hospital for Children

*General Background*

Since our founding in 1940, the Alfred I. duPont Hospital for Children has served thousands of children from across the country and around the world. The hospital is a division of Nemours, which operates one of the nation's largest health systems devoted to pediatric patient care, teaching, and research. Located just outside of Wilmington, Delaware, on 300 acres of parkland, the hospital offers a remarkably beautiful and tranquil setting in which to heal.

*Accreditation*

The Nemours Children's Clinic provides the physician services of the hospital at its main campus, and at pediatric primary and specialty care locations throughout Delaware, southeastern Pennsylvania, and southern New Jersey. Together the duPont Hospital and Nemours Children's Clinic are the academic partner of Thomas Jefferson University and Jefferson Medical College.

Mission Statement:

To provide leadership, institutions, and services to restore and improve the health of children through care and programs not readily available, with one high standard of quality and distinction regardless of the recipient's financial status.

Ownership:

Nemours (Jacksonville, Fla.)

Medical Staff:

Over 400 Nemours subspecialty physicians and surgeons

Services Offered:

The Nemours/Alfred I. duPont Hospital or Children offers all the specialties of pediatric medicine, surgery, and dentistry in a spacious, comfortable, and family-focused facility.

Number of Employees:

2,700

Licensed Beds:

180

Staffed Beds:

159

Location of Facilities:

1600 Rockland Road  
Wilmington, Delaware 19803

## St. Francis Hospital Profile

### Introduction:

#### *Name*

St. Francis Healthcare Services

#### *General Background*

The Sisters of St. Francis of Philadelphia established St. Francis Hospital in 1924. Today, St. Francis Hospital is a member of Catholic Health East, the largest Catholic healthcare system on the East Coast and operates under the identity of St. Francis Healthcare Services. In addition to the hospital, St. Francis Healthcare Services includes Franciscan Care Center at Brackenville, the Center of Hope and the North Wilmington Women's Center.

#### *Accreditation*

St. Francis Hospital is accredited by the Joint Commission on Accreditation of Healthcare Organizations. St. Francis Home Care is accredited by the Joint Commission on Accreditation of Healthcare Services, and the Family Practice Residency Program is accredited by the American Council on Graduate Medical Education.

### Mission Statement:

#### Our Mission

St. Francis Healthcare Services, a member of Catholic Health East, under the sponsorship of Hope ministries, seeks to be a compassionate, healing presence in the communities we serve. We continue in the tradition of our founders, the Sisters of St. Francis of Philadelphia.

#### **Our Vision**

Living out our core values, we will provide high quality holistic care.

#### **Our Core Values**

##### *Reverence for each person*

We believe that each person is a manifestation of the sacredness of human life.

##### *Community*

We demonstrate our connectedness to each other through inclusive and compassionate relationships.

##### *Justice*

We advocate for a society in which all can realize their full potential and achieve the common good.

##### *Commitment to those who are poor*

We give priority to those whom society ignores.

##### *Stewardship*

We care for and strengthen the ministry and all resources entrusted to us.

##### *Courage*

We dare to take the risks our faith demands of us.

---

*Integrity*

We keep our word and are faithful to who we say we are.

## Christiana Care Hospital Profile

### Introduction:

#### *Name*

Christiana Care Health System

#### *General Background*

Christiana Care Health System serves Delaware and neighboring areas of Pennsylvania, Maryland and New Jersey. Christiana Care offers a continuum of services-including in-and out-patient hospital-based care, home health care, preventive medicine and rehabilitation, diagnostic and imaging services, transitional and long-term care, and a commercial managed care health plan-in partnership with more than 1,300 community physicians, surgeons and dentists representing every medical practice and specialty.

#### *Accreditation*

In the 2001 survey, Christiana Care was accredited by the Joint Commission on the Accreditation of Healthcare Organizations (JCAHO).

### Mission Statement:

Christiana Care Health System is dedicated to improving the health of all individuals in the communities we serve through health care services, education and research.

### Ownership:

Christiana Care is a not-for-profit, private teaching health system operated by the Board of Directors of the Christiana Care Corporation. The Board represents a cross-section of business and community leaders.

### Medical Staff:

Christiana Care's Medical-Dental Staff includes more than 1,300 community physicians, surgeons and dentists representing every medical practice and specialty.

### Services Offered:

Christiana Hospital, Christiana Care's flagship tertiary care facility, is the state's designated Level I (highest capability) trauma center. The Christiana Hospital campus is also home to Christiana Care's:

- **Helen F. Graham Cancer Center** - a state-of-the-art outpatient facility, which serves as headquarters for our regionally acclaimed cancer program. The Cancer Program emphasizes improving prevention and early detection and improving survival and quality-of-life. Designated by the National Cancer Institute as a community clinical oncology program, Christiana Care provides access to today's most promising cancer research clinical trials.
- **Center for Heart and Vascular Health**- the program's comprehensive services include open heart surgery (more than 800 cardiovascular surgeries each year), diagnostic and interventional cardiac catheterization, dedicated electrophysiology lab, noninvasive studies, research, lipid program, rehabilitation and primary and secondary heart disease prevention.
- **Women's health program** - one of the busiest (7,122 births a year), most advanced maternity services in the nation, including a Level III (highest capability) neonatal intensive care unit.

The Eugene du Pont Preventive Medicine & Rehabilitation Institute features a full range of medically supervised preventive and alternative/complementary health services including nutrition and fitness, stress reduction and smoking cessation, adolescent pregnancy prevention, and special programs for arthritis, asthma, cancer, cardiovascular disease, diabetes weight management and osteoporosis.

Wilmington Hospital - includes an inpatient rehabilitation facility, joint

## Nanticoke Memorial Hospital Profile

### Introduction:

#### *Name*

Nanticoke Memorial Hospital

#### *General Background*

Nanticoke Memorial Hospital was originally incorporated in 1945 by a group of citizens concerned by the lack of health care facilities in western Sussex County. Over the years, involved citizens and a progressive administrative team have continued to direct the course of Nanticoke Memorial Hospital, and its affiliates, organized under the corporate title of Nanticoke Health Services. What started as a 32-bed hospital in 1952 has grown to include extended care, business services, outpatient services, cancer care services, medical centers across Sussex County Delaware, and a host of preventative medicine and health programs.

#### *Accreditation*

#### **Accreditation**

- Joint Commission on Accreditation of Healthcare Organizations
- American Association of Blood Banks
- Nuclear Regulatory Commission
- American College on Radiology
- Mammography Quality Standards Act

### Mission Statement:

"We exist to positively impact our communities' quality of life through improved health status."

### Ownership:

Nanticoke Health Services, Inc. is the non-profit and parent corporation of Nanticoke Memorial Hospital and four other corporate entities.

### Medical Staff:

The medical staff of Nanticoke Memorial Hospital totals 139 active and consultant staff members.

### Services Offered:

#### **Medical Services**

- Major services include acute inpatient care comprised of cardiology, gastroenterology, infectious disease, neurology and pulmonology.
- Nutrition Services
- Cardiac Services including cardiac catheterizations, echocardiography, pacemakers, stress testing and telemetry
- Cancer Services including radiation therapy, chemotherapy and pain management

#### **Surgical Services**

- Major services include orthopedics, general and vascular surgery, ophthalmology, urology, gynecology, plastic/reconstructive surgery, bariatric (obesity) surgery, otolaryngology (ENT), thoracic, podiatry and laser
- Day Surgery Services
- Lithotripsy

#### **Diagnostic Services**

- General radiology
- Fluoroscopy
- Magnetic resonance imaging
- Computerized tomography
- Nuclear medicine
- Ultrasound
- Endoscopy suite

- EEG
- Sleep disorder studies
- Mammography
- Stereotactic breast biopsy

**Critical Care**

- Multidisciplinary intensive care and progressive care unit
- Hemodialysis
- Peritoneal dialysis

**Emergency Services**

- 24-hour emergency services
- Level III Trauma Center

**Obstetric and Pediatric Services**

- Birthing suites
- Ronald McDonald rooms

**Rehabilitation Services**

- Physical and occupational therapy
- Speech pathology
- Cardiac rehabilitation services
- Enterostomal therapy
- Positive Steps Fitness Center

**Community Related Services**

- Laboratory courier services
- Consumer health education programs
- Support groups
- Health Screenings: cholesterol, blood sugar monitoring, prostate cancer screening, risk for stroke assessment, blood pressure checks
- High school-based wellness centers
- Nutrition counseling

Number of Employees: 1100

Licensed Beds: 140 Hospital Beds  
110 Extended Care Beds

Location of Facilities:

**Acute Care**  
Nanticoke Memorial Hospital, Seaford, DE

**Extended Care**  
LifeCare at Lofland Park, Seaford, DE

**Off Campus Care**  
Mid-Sussex Medical Center, Millsboro, DE  
Georgetown Medical Center  
Seaford Medical Center  
Laurel Family Practice Center

**Wellness Centers**  
Seaford High School Wellness Center  
Laurel High School Wellness Center  
Delmar High School Wellness Center

**Business Services**  
Nanticoke Occupational Health Services, Seaford, DE  
Practice Management Associates, Seaford, DE  
Small Wonders Child Care, Seaford, DE

Affiliations

- Clinical rotations with various schools in nursing, radiology, laboratory, and certified nursing assistant
- Student intern program with Seaford and Laurel High School

BG 4.27.06

**Definitions:**

**Admission source** - The source of the patient's admission, e.g., emergency, another hospital, or long term care facility, which describes how the patient was admitted.

**Aggregate charges** - The sum of all charges for all hospital stays.

**Body System** - In this report, it represents the more generalized grouping of CCS categories that correspond with ICD-9 CM chapter headings.

**Clinical Classification System (CCS)** - This refers to the classification system developed at the Agency for Healthcare Research and Quality (AHRQ) used to aggregate ICD-9-CM codes into broader, homogeneous groups. In this report, the 2006 version of the single-level diagnosis classification scheme is used for both diagnoses and procedures. Because CCS codes are based on ICD-9-CM diagnoses, they can be mapped to ICD-9-CM chapter headings. Data in this report are presented by both CCS diagnoses and by ICD-9-CM chapters. For more information, see <http://www.ahrq.gov/data/hcup/>.

**Discharge** - A completed inpatient hospitalization. A hospitalization may be completed by death or by releasing the patient to his or her home, a long-term care facility, another hospital, or if the patient leaves against medical advice.

**Discharge Status** - The disposition of a patient at discharge from the hospital into one of the following categories:

- Home or routine discharge - patient returned to previous place of residence after discharge from the hospital.
- Long-term care facility - patient entered a nursing home including skilled nursing facilities, extended care facilities, custodial care facilities, or other long term care placement upon discharge from the hospital.
- Another short-term hospital - patient transferred to another short-term hospital at discharge, including short-term maternity hospitals.
- Against medical advice (AMA) - patient left the hospital against medical advice.
- Expired - patient who died during the inpatient stay.
- Home health care - patient discharge to home where care is provided by a home health care agency for the purpose of promoting, maintaining, or restoring health, or for minimizing the effects of disability and illness, including terminal illness.
- Unknown - patient whose status was not entered.

**Expected source of payment** - The principal expected source of payment for the hospitalization.

- Medicare - The health insurance program for the aged and disabled administered by the Centers for Medicare and Medicaid Services (formerly the Health Care Financing Administration).
- Medicaid - A jointly funded Federal-State health insurance program providing medical care to those unable to afford it.
- Worker's compensation - A State or municipal disability insurance or industrial accident insurance.
- Private health insurance- Includes HMO/PPO, Blue Cross/Blue Shield, and other private.
  - HMO/PPO - Any health maintenance organization (HMO) or preferred provider organization (PPO) sponsored by consumers, communities, physicians, or hospitals.
  - Blue Cross/Blue Shield and other private - A private insurance plan not specified as an HMO/PPO. This includes Blue Cross/Blue Shield plans, medical coverage provided by life insurance companies, casualty insurance companies, health insurance companies, and independent plans such as employer/union-sponsored plans and/or self-funded plans (partial or total).
- Self-pay - The majority of the costs for the hospitalization were expected to be paid by the patient, spouse, family, or next-of-kin.
- Other government- Other Federal, State, or local government other than worker's compensation, Medicare, and Medicaid not listed separately, including casualty insurance paid by the State, Federal or State medical research grant.

- No charge- Patients admitted with the understanding that payment would not be expected because the medical services are free, e.g., charity, research, or teaching patients.
- Other and not stated- Other

**Hospital charges** - The amount the hospital charged for the entire hospital stay.

**International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM)** - The official system of assigning codes to diagnoses and procedures associated with hospital stays in the United States. The ICD-9-CM is based on and is compatible with the World Health Organization's International Classification of Diseases, Ninth Revision. ICD-9-CM is divided into 17 chapters and 2 supplemental classifications. Diagnoses are grouped under chapters arranged primarily by body system. In addition, there are chapters for infectious and parasitic diseases; neoplasms; endocrine, metabolic, and nutritional diseases; mental disorders; complications of pregnancy, childbirth and puerperium; certain conditions originating in the perinatal period; congenital anomalies; and symptoms, signs and ill-defined conditions. The two supplemental classifications are for factors influencing health status and contact with health services and classification of external causes of injury and poisoning. More information can be found online at [www.cdc.gov/nchs/icd9.htm](http://www.cdc.gov/nchs/icd9.htm).

**Length of stay** - The number of nights the patient remained in the hospital for this stay.

**Liveborn** - The term for the hospitalization that results from an infant being born in the hospital, also referred to as newborn. They are identified by a specific range of ICD-9 CM codes on the discharge record. Records of infants born in the hospital are separate and distinct from the mothers' discharge records, so excluding liveborn infants does not remove the mother's discharge data from the analysis.

**Long-term care facility** - A facility that provides a specific level of personal or medical care or supervision to residents. Types of long-term care facilities include licensed nursing homes, skilled nursing facilities (SNF), intermediate care facilities (ICF), hospice medical facilities, and other health care institutions, such as institutions for the mentally retarded and developmentally disabled.

**Mean length of stay** - Average length of stay for discharges. It is calculated by dividing the total number of days of care by the number of discharges.

**Obstetric** - The branch of care that deals with the management of pregnancy, labor, and the puerperium.

**Puerperium** - The period or state of confinement after labor and giving birth.

**Primary diagnosis** - The diagnosis chiefly responsible for the admission of the patient to the hospital; it is the first-listed diagnosis specified on the discharge summary of the medical record.

**Rate** - A rate is a measure of an event, disease, or condition in relation to a unit of population for a specified time. For example, the four-year average discharge rate per 10,000 population is calculated as follows:

$$(\text{Four-year total number of discharges} / \text{Four-year total population}) * 10,000$$

**Short-stay Hospitals** - A short-stay hospital is one where the average length of stay is less than 30 days. Due to its status as a long-term care facility, Select Specialty in Wilmington is excluded from the data presented in this report. Select Specialty is associated with St. Francis hospital.

**Uninsured patients** - A term for those patients whose primary payer is listed as self-pay.
